ACKNOWLEDGEMENTS

The MOVE UP Consortium wishes to thank all the individuals, organizations, and institutions who have contributed in every Step which eventually helped in coming up with this Report, and also displayed continued support in pushing forward the Project's desired goals.

To DSWD:

- DSWD-SLP National Program Management Office through the leadership of Director Restituto Macuto, the National Program Manager of DSWD-SLP, Mr. Luis De la Cruz, the Partnership Head of DSWD-SLP NPMO; Mr. Vladimir Cabrera and Donards Kim Tañedo for valuable inputs; Phoebe Faith Obligar, Norma Ruth Raymundo and Jowie Abendan for participation.
- DSWD-SLP NCR Office through the kind accommodation and participation of Ms. Esperanza Manggoba, Jessa Christie Atim and the rest of SLP-NCR Team.
- DSWD-Disaster Response Management Bureau through the facilitation of Assistant Bureau Director Rey Martija and consistent participation of Ms. Hilary Marie N. Ratilla, Ms. Abigail Lorraine C. Antonio and the rest of DREAMB Team.

To DOLE:

- DOLE Office of the Secretary for linking the Consortium to the DOLE-BWSC.
- DOLE – Bureau of Workers with Special Concerns through its Bureau Director, Atty. Karen Trayvilla and her team, for the time and expertise in tightening the desk review report for the implementing guidelines of DILEEP and the MOU between the Consortium and DOLE.

To MMDA:

- Office of the General Manager, Undersecretary Jose Arturo Garcia Jr. for providing a copy of the NCR Development Plan and *Oplan Metro Yakal Plus.*
- Office of the Assistant General Manager for Planning, through Assistant Secretary, Gen. Jose Campo for appreciating the updating of NCR Development Plan.

To Marikina City DRRMO for initial engagement and collaborative posture.

To CSiDM:

- Mr. Simon Peter Gregorio, the Executive Director; and Mr. Jerome Casals as an international expert on DRRM policies for guiding the Consortium in developing various frameworks and thinking tools.

To MOVE UP Consortium Organization Members and Key Personnel:

- Mr. Reynato Caño, the Head of Project, representing AAH for the dedication and determination in facilitating the Review; Mr. Juan Blenn Huelgas, the Focal Person on DRRM of AAH, for strategic refocusing and expert guidance in all the steps; Mr. Genaro Sanchez and Ms. Menchie Lacson for participation.
- Ms. Aura Dagcutan, Ms. Claudine Complativo, and Mr. Chrisnobel Cruz of PLAN International for valuable insights and inputs on necessary documents.
- Ms. Ansherina Talavera, Ms. Marice Hermosa; Mr. Raymund Laddaran of ACCORD and CARE Philippines for coordination and insights.

To the Team of Consultants contracted under MOVE-UP AAH for the Subnational Policy Review:

- Mr. Alvin M. Silva, the Lead Consultant for facilitation the whole process and for preparing this Report; Mr. Benigno Balgos for the Review of Related Policies and Plans and other contributions; Atty. Liza Cañada and Mr. Christopher Villarino for valuable contributions; Mr. Xanders Lao and Ms. April Rose Baqueros for lay-outing of the report and documentation of key informant conversations and Ground Working; and Ms. Leah Reyes for facilitation and documentation of all the virtual sessions with DSWD-SLP.

KEY TERMINOLOGIES

- **Alternative Temporary Shelter** - This concept focuses on providing options for temporary shelters in the urban setting in response to emergency situations. The ATS component proposes practical and cost-saving temporary emergency shelters such as modular tents or butterfly shelters which can be put up in open spaces identified by the city government. At the same time, the ATS looks into the need of ensuring the dignity of displaced populations by addressing current issues in traditional temporary shelters including overcrowding, lack of privacy, lack of WASH facilities that discourage people in high risk areas from evacuating.

- **Appreciative Inquiry -** a systemic approach to organizational change and learning. It is a strategy for purposeful change that identifies the best of "what is" to pursue dreams and possibilities of "what could be".[1]

- **Climate change adaptation (CCA**) the adjustment in natural or human systems in response to actual or expected climatic stimuli or their effects, which moderates harm or exploits beneficial opportunities (RA 10121). Adaptation initiatives are conducted in an effort to reduce harmful effects and benefit from beneficial opportunities (CCC).

The NDRRMP 2011-2028 Thematic Areas and its Vision
Data Source: NDRRM Plan (2011)

- **DRRM** - the systematic process of using administrative directives, organizations, and operational skills and capacities to implement strategies, policies and improved coping capacities in order to lessen the adverse impacts of hazards and the possibility of disaster. Prospective disaster risk reduction and management refers to risk reduction and management activities that address and seek to avoid the development of new or increased disaster risks, especially if risk reduction policies are not put in place (RA 10121).

[1] Barbin, E. (2006). Appreciative Inquiry Primer. Makati, Philippines.

- **Financial Inclusion** - individuals and businesses have access to useful and affordable financial products and services that meet their needs – transactions, payments, savings, credit and insurance – delivered in a responsible and sustainable way[2].

- ***Poor, Vulnerable, Marginalized***

  Poor - families whose income fall below the poverty threshold as defined by the government and/or those that cannot afford in a sustained manner to provide their basic

  Vulnerable - refers to households confronted by ex-ante risk that if currently non-poor, will fall below the poverty line, or if currently poor, will remain in poverty. (NEDA)

  Marginalized people are those groups in society who, for reasons of poverty, geographical inaccessibility, culture, language, religion, age, gender, migrant status or other disadvantage, have not benefited from health, education, employment and other opportunities, and who are relegated to the side-lines of political persuasion, social negotiation, and economic bargaining.

- ***Poverty*** - Income or spending is insufficient to ensure a minimum level or state of well-being (below an official threshold)

- **Resilient livelihood** - This concept refers to adapting practices such as identifying alternative livelihood options within existing value chains and accumulating savings that can be used in times of disaster. This also includes financial literacy activities intended to change the mindset and attitude of the urban poor to one in which social and economic protection are viewed as their obligation. With proper social preparation and readiness, the action introduces effective and appropriate models of savings, livelihood improvement options and risk transfer.

- **Risk and Shock -** Uncertain event that may damage someone's well-being leading to poverty; Risks are pervasive, but information on risks and shocks is mostly scarce in a developing country

- **Risk transfer mechanism** - the process of formally or informally shifting the financial consequences of particular risks from one party to another whereby a household, community, enterprise or state authority will obtain resources from the other party after a disaster occurs, in exchange for ongoing or compensatory social or financial benefits provided to that other party.

[2] World Bank (2019). Financial Inclusion.

- **Savings Mobilization** - refers to creating safe and sound institutions where savers can place their deposits with the expectation that they will receive the full value of their funds, plus a real return, upon withdrawal. It means developing appropriate products to satisfy the local demand for voluntary savings services and marketing those products to savers of varying income levels[3].

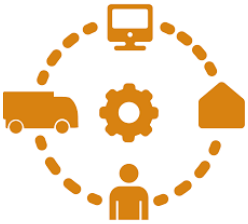

- **Social protection (SP)** - constitutes policies and programs that seek to reduce **poverty** and **vulnerability** to risks and enhance the social status and rights of the **marginalized** by promoting and protecting livelihood and employment, protecting against hazards and sudden loss of income, and improving people's capacity to manage risks. *(adopted in 2007 by the SDC Cabinet Level).* Components of SP include: social insurance; social safety nets, social welfare; and labor market intervention.

- **Sustainable livelihood** – based on the British Department for International Development (DFID), a livelihood can be classified as sustainable, if it is resilient in the face of external shocks and stresses, if it is independent from external support, if it is able to maintain the long-term productivity of natural resources and if it does not undermine the livelihood options of others.

- **Systems Thinking -** an approach to integration that is based on the belief that the component parts of a system will act differently when isolated from the system's environment or other parts of the system.[4]

- **Urban Resiliency** - reflects the principal objective and bouncing back strategy of an urban system that can maintain and rapidly return to desired functions in the face of a disturbance, to adapt to change, and to quickly transform systems that limit current or future adaptive capacity…"[5]

- **Vulnerability -** Probability to become poor in the future; sources of vulnerability are risks and shocks and lack of physical, social and human capital to withstand shocks.

EXECUTIVE SUMMARY

PROJECT OVERVIEW

The ***Moving Urban Poor Communities Towards Resilience*** **(MOVE UP)** is a disaster risk reduction and management (DRRM) project being implemented by a Consortium of non-government organizations (NGOs), namely: Action Against Hunger (AAH), Assistance and Cooperation for Community Resilience and Development (ACCORD), CARE Philippines, and Plan International. The Project aims to strengthen the urban resilience of the most vulnerable population through an improved alternative temporary shelter system, increased livelihood resilience, and institutionalized mechanisms and models of urban resilience. The Project is funded by the European Union Humanitarian Aid (ECHO) under its Humanitarian Action Plan (HIP) for Southeast Asia and the Pacific Program.

The first two phases of the Project were implemented in the cities of Quezon, Caloocan, Malabon, Navotas and Valenzuela (QC-CAMANAVA). In the third phase, the Project seeks to be replicated in the cities of Marikina and Taguig. It also planned to scale up the good practices and lessons learned at the subnational level (Metro Manila).

As a pre-requisite to scaling up, the Consortium was determined to review relevant policies and plans in the cities of Marikina and Taguig, as well as policies and plans in the Sub-national Level (Metro Manila). The main purpose of reviewing relevant policies and plans was to understand existing efforts on urban resilience as well as identify gaps, particularly in the areas of alternative temporary shelter (ATS), resilient livelihood (RL), risk transfer mechanism (RTM), and protection issues (for vulnerable urban poor dwellers such as children, and women, persons-with-disabilities, and older persons among others). The recommendations from the review were expected to serve as the bases in mainstreaming urban resilience model of MOVE UP in Marikina City, Taguig City, and Metro Manila. To properly carry out the review process, the Consortium agreed to carry out the following steps:

Review of Related Urban Resiliency Laws and Policies (RRURLP) and MOVE UP Urban Resiliency Policy Review and Integration Framework Development. This helped in gaining understanding of the existing international and local researches and debates relevant to systems thinking, urban poverty, urban resiliency, and policy development. It provided insights on how to apply the related concepts with the intention of shaping a MOVE-UP Urban Resiliency Policy Review and Integration Framework.

Desk Review of Relevant Policies and Plans. This provided a reference and confidence of stakeholders to proceed with the two-level policy/plans review and analyses.

Key Informant Conversations and Ground Working. This was expected to facilitate the validation of draft policy review containing gaps analysis, recommendations, & process of integration of policy recommendations into city and sub-national policies /plans. It successfully drew out comments, suggestions, alignment arrangements in preparation for Validation and Integration Workshops.

Actual Conduct of Validation and Integration Conversations or Workshops. This was the actual conduct of validation conversations towards co-creating *prototype* of policy recommendations and exploration of the possibility to integrate said recommendations into corresponding policies or plans. The integration process as one of the components of this step was viewed as an ad-hoc term in co-shaping the mainstreaming process into the policies or plans of government stakeholders.

CALIBRATED TARGETS OF THE REVIEW

The Review officially started in September 2019. It finished Steps 1 and 2 in November 2019, and it covered all the necessary national and subnational policies and plans except of the two cities. The output for Step 1 is presented in the succeeding section. The outputs for Step 2 covered the nine outputs as enumerated herein:

1. NCR Regional Development Plan 2017 – 2022 (see Annex 1);
2. Metro Manila Earthquake Contingency Plan or *Oplan Metro Yakal Plus* (see Annex 2);
3. DILG Memorandum Circular No. 122 Series of 2018 on Guidelines for Local Government Units on the Strengthening of Evacuation Systems Using Local Disaster Risk Reduction and Management Fund (LDRRMF) (see Annex 3);
4. DILG Memorandum Circular No. 73 Series of 2012 on Utilization of Local Disaster Risk Reduction and Management Fund (LDRRMF) (see Annex 4);
5. DILG Memorandum Circular No. 2015-77 on Guidelines on Mainstreaming Climate Change Adaptation and Disaster Risk Reduction in Local Development Planning;
6. **DSWD Administrative Order (AO) No. 13 Series of 2015 on Disaster Response Operation Guidelines;**
7. **DSWD Administrative Order (AO) No. 9 Series of 2014 on Guidelines in the Implementation of Temporary Shelter Assistance and Prioritization of Victims of Disaster/Internally Displaced Persons;**
8. **DSWD Memorandum Circular No. 22 Series of 2019 on Comprehensive Guidelines on the Implementation of the Sustainable Livelihood Program;**
9. **DOLE Department Order No. 173 Series of 2017 on Revised Guidelines in the Implementation of DOLE Integrated Livelihood and Emergency Employment Program (DILEEP).**

It was clear that except in the case of items 1 and 2 above, the government's policy-making arrangements related to social protection, resilient livelihood (RL), risk transfer mechanism (RTM) and alternative temporary shelter (ATS) do not happen in the subnational level, rather it is in the national level of government agencies like DSWD, DOLE and DILG. This led to calibrate the priorities of the Review. To move forward with Steps 3 and 4 of the Review process, the Consortium decided to prioritize items 6 and 7 in relation to promoting ATS, and items 8 and 9 in relation to promoting social protection, RL and RTM.

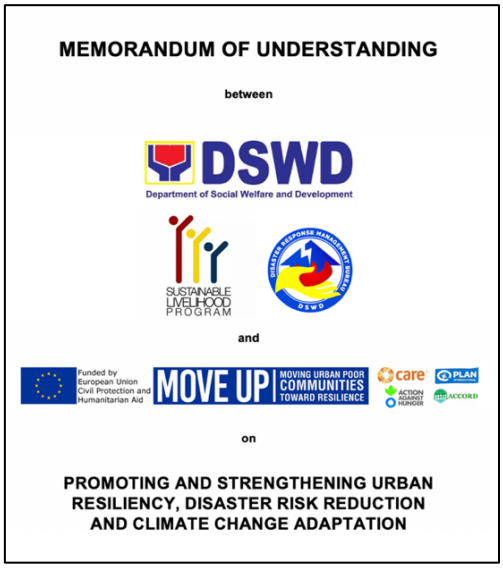

Also, the Consortium was able to review the Local DRRM Plan (see Annex 5) and Earthquake Contingency Plan of the City of Marikina (see Annex 6). Items 1 to 9 proved to be relevant in promoting social protection, resilient livelihood (RL), risk transfer mechanism (RTM) and alternative temporary shelter (ATS). The Consortium was able to submit a proposal for collaboration with the City Government of Marikina, as this was asked by the Marikina – DRRMO.

PUSHING FORWARD WITH THE NECESSARY STEPS

The **Step 3 - Key Informant Conversations and Ground Working** - started and concluded in January 2020 together with:

1. DSWD-SLP National Program Management Office to kick-off the conversations on the possibility of enhancing the DSWD Memorandum Circular No. 22 Series of 2019 (see Annex 7);
2. DSWD-SLP National Capital Region to provide context on the conversation occurred in DSWD-SLP NPMO on the possibility of enhancing the DSWD Memorandum Circular No. 22 Series of 2019 (see Annex 8);
3. DSWD-DREAMB on DSWD Administrative Order (AO) No. 13 Series of 2015 (see Annex 9);
4. DOLE-Bureau of Workers with Special Concerns (BWSC) on Department Order No. 173 Series of 2017 on Revised Guidelines in the Implementation of DOLE Integrated Livelihood and Emergency Employment Program (DILEEP) (see Annex 10).

These four efforts of the Consortium together with the stakeholders led to drafting of two Memorandum of Understanding (MOU). An MOU between the Consortium and DSWD (see Annex 11), and another MOU between the Consortium and DOLE (see Annex 12).

The expected results though promising as co-shaped by stakeholders were outweighed by uncontrollable natural calamities which started from the eruption of Mount Taal in January of 2020, then followed by the COVID-19 pandemic starting from February 2020 forcing the government the declaration of lockdowns in Mega Manila in March 2020. The resources and focus of the government were diverted, all government agencies were called to action as mandated by the *Bayanihan* to Heal as One Act, also known as the *Bayanihan* Act and officially designated as Republic Act No. 11469. As a result, it seemed not doable to purse Step 4 - Actual Conduct of Validation and Integration Conversations or Workshops; DOLE, DSWD-DREAMB and other agencies were not able to proceed with succeeding processes. With the generosity and kind considerations of DSWD-SLP NPMO and DSWD-SLP NCR, however, several virtual sessions were conducted as an attempt to find alternatives from the previous agreed arrangements, which is considered already as Step 4.

HIGHLIGHTS OF LESSONS AND RECOMMENDATIONS THAT EMERGED IN THE PROCESS

A. ON THE COMPLEXITY OF POLICY REVIEW AND STRATEGIC STAKEHOLDERS ENGAGEMENT

1. **Policy reviews and researches need an integrative[6] and systems thinking capability.** Various stakeholders with divergent interests complicate the whole process necessitating a much higher order of thinking. Prof. Morato (2008) elucidated the need for a policy reviewer/researcher to consider several anchors in which policy makers usually base their decisions. These are the historical precedents, enacted laws, philosophy of governance, world view of policy makers or the "bias" perspective of the policy maker, immediate circumstance or prevailing concerns, degree of diversity among stakeholders, relative strengths of the policy opposing policy advocates, and complexity of the policy issue. These were employed in reviewing the abovementioned policies and plans alongside with international and regional conventions, national policies and plans, MOVE UP's guidance notes, among others.

2. **It was clear that the focus and the deliberate intention was to conduct a policy review in the subnational level, but the priority policies reviewed (which were subject for validation) though national in scope were recognized as pre-requisite for further collaboration because policy execution starts at the sub-national level.** The idea of engaging central offices or national program management offices was deemed necessary to strengthen urban resiliency policies/plans in the subnational level in relation to its promotion of the Project's thematic areas. It was also agreed, however, that it is also important to capture actual policy executions, difficulties in implementation, best practices, best principles, and strategies of said policies in the subnational level.

POLICY-MAKING AT NATIONAL LEVEL

POLICY-EXECUTION STARTS AT SUB-NATIONAL LEVEL

3. **The priority policies (which were subject for validation) have the closest intersection with MOVE UP's major thematic areas including ATS and RL with RTM including SP, and even with MOVE UP's urban resiliency model.** Out of numerous policies reviewed by the Consortium, these three (3) policies have provisions which are critical touch points or "low hanging fruits" in terms of integrating its policy recommendations. These policies or the strategies indicated in the policies or policy provisions are being referred in provisions of NCR Development Plan and *Oplan Metro Yakal Plus*, and in other policies reviewed.

4. **In wielding relationships with stakeholders to do a policy review especially with the government, the mobilizer like the Consortium shall be mindful of the terms being used in transmitting key messages across external stakeholders**. Examples of these include the use of terms like *"review", "assessment",* and *"integration".* These terms may be undermining the effort, talent, and time in establishing internal protocols. The term "urban poor" is mostly likely

[6]The ability to put multiple dimensions of broad-spectrum issue together into a coherent and comprehensive whole.

to be frowned upon by city government because it may undermine their accomplishments in addressing urban poverty. Choosing the right key messages is an intuitive process. Intuition in this case is like knowing that something is wrong with why the stakeholders deliberately ignore the benefit of partnering with the Consortium no matter how good the intention, and no matter who talked to the "gate-keepers" or to the decision-makers.

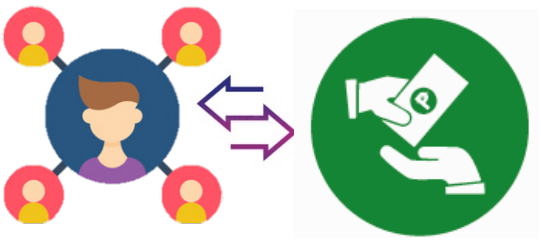

5. **It was clear that there is a need to promote the government-wide coherence in policies/plans/programs**. The coherence among policies/plans/programs across DILG, DSWD and DOLE is a necessary condition that would create an enabling environment towards addressing the fragmented and overlapping policies/plans/programs. While some policies/programs exhibit internal coherence (i.e. complementarity of policies and programs, and delivery mechanisms within a national agency), these policies need harmonization towards an all-embracing social protection, urban resiliency and DRRM system.

B. ON SOCIAL PROTECTION, RESILIENT LIVELIHOOD, RISK TRANSFER MECHANISM, AND ALTERNATIVE TEMPORARY SHELTER

1. **In the Philippine context, social protection is anchored on the National Social Protection Strategy (NSPS) as adopted in 2009 (SDC Resolution No. 2 Series of 2009) with corresponding institutional arrangements between NEDA and the DSWD, with significant input from other agencies, most notably DOLE**. This inter-agency mechanism was created to operationalize the identified imperatives for action under the social protection strategy as well as the institutional arrangements including reporting of each of the responsible government agency/entity. This directs that SP programs should be grouped into a unified National Social Welfare Cluster (Administrative Orders 232 and 232-A). To further strengthen its role in social protection, the DSWD released AO Number 7, Series of 2011. Components of social protection include: social insurance; social safety nets, social welfare; and labor market intervention.
The DSWD-SLP and DILEEP as government programs are concrete translation of labor market intervention. The thematic areas which MOVE UP intends to strengthen are directly linked with the NSPS. This served as an important rallying point for MOVE UP's initiative in promoting social protection in all its thematic areas, instead of looking at it as a separate field of intervention.

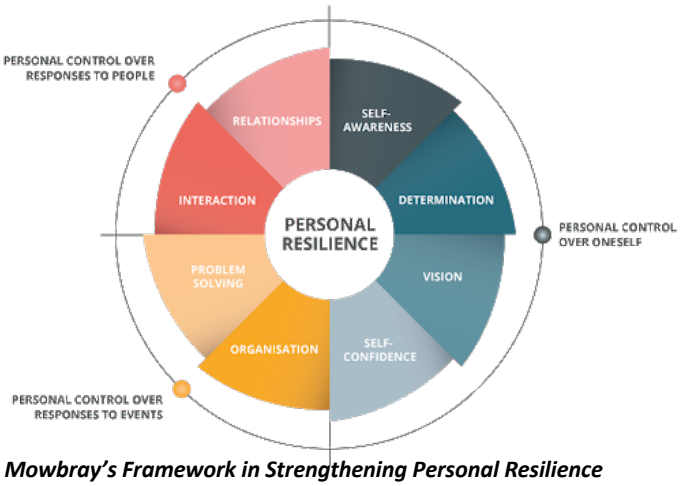

2. **Sustainable livelihood is closely intertwined with resilient livelihood.** These two interrelated operational and technical terms from separate initiatives (DSWD-SLP and MOVE UP) became the take-off point in enhancing livelihood interventions which deliberately increases urban resilience capacity and mechanisms for the vulnerable communities.

3. **Integrated Livelihood of DILEEP is another operational and technical term in which resilient livelihood is closely interrelated.** The Philippine Constitution and the Philippine Labor Law, mandate the stakeholders to protect labor, promote full employment, provide equal work opportunity regardless of gender, race, or creed, and regulate relations

between employees and employers. It was also emphasized that this is directly aligned with PDP 2017–2022 definition of social protection as a set of policies that "*builds the socioeconomic resilience of the poor and those who recently graduated from poverty.*

4. **Personal resilience should be considered as part and parcel of the whole resilient livelihood intervention.** Personal resilience has three components- *Personal Control Over Oneself, Personal Control Over Responses to People, Personal Control Over Responses to Events*. It was appreciated that a livelihood cannot be sustainable or resilient without looking at personal resilience as necessary element of over-all resilience.

Mowbray's Framework in Strengthening Personal Resilience
Data Source: Management Advisory Service (2018)

5. **MOVE UP has become the thought leader in promoting and strengthening urban resilience for the vulnerable communities through its thematic areas - *RL, RTM, and ATS.*** The most relevant reference in promoting livelihood resilience as a multi-stakeholder intervention is MOVE UP's well-validated ***Proof of Concept*** which is in line with SME Resilience Road Map in the Philippines, a document crafted by stakeholders including iPrepare Business, Asian Disaster Preparedness Center (ADPC), Asian Development Bank (ADB), Government of Canada, Federal Ministry for Economic Cooperation and Development (BMZ), Global Initiative on Disaster Risk Management (GIDRM) and GIZ (GmbH). Together with international experts, local governments, private corporations, and community associations, the Consortium was able to co-develop a well-validated proof of concept with its years of implementation and validation of its processes in promoting SP, RL, RTM, and ATS. The Consortium successfully converted a project concept into a body of knowledge. This was appreciated by DSWD-SLP, and DSWD-DREAMB and DOLE-BWSC.

   The SME Resilience Road Map provided a comprehensive background and an expert recommendation in promoting and strengthening resilience of livelihood interventions. The content of the report became a positive affirmation of MOVE UP's proof of concept. The challenge is to update it according to the fast-changing landscape or popularly known as volatile, uncertain, complex, and ambiguous (VUCA) world.

6. **The MOVE UP 's proof of concept enabled the risk transfer mechanism (RTM), even though comprises a wide group of financial instruments, to become a collaborative vehicle for the urban vulnerable communities and other stakeholders by displaying concrete evidences and by simplifying this into actual savings mobilization and micro-insurance interventions**. The Consortium focuses on organizing community savings group as a way to transfer risks and develop alternative coping mechanism in bouncing back from a disaster. Its effort also in promoting micro-insurance for livelihoods is a widely accepted area for strengthening. Both of these are highly

appreciated by stakeholders, but the stakeholders has to emphasize the point that both of these could be efficient and effective if these would be viewed as part of the financial inclusion area involving various stakeholders, and as a market-based solutions employing the expertise of private corporations coupled with tech-enabled platforms for easy and affordable access. The regulatory framework which is the Insurance Memorandum Circular 1-2010 issued by Insurance Commission shall also be considered.

7. **MOVE UP's Alternative Temporary Shelter is an area which it would need further policy advocacy interventions**. The initial policy recommendations putting forward the validity and necessity of ATS as a preparedness and response DRRM intervention are well accepted by DREAMB. However, the stakeholders faced multi-layer and complex issues surrounding the intent of embedding ATS in relevant policies. For one, the government's moratorium in providing shelter interventions at the present, served as one of the hurdles in pushing forward. Another hurdle is semantics. Various terms are used in various policies which confuses the stakeholders at the policy level. The key is to harmonize understanding and protocol in executing ATS interventions among various stakeholders.

C. TRANSITION CONSIDERATIONS

The Consortium along with key stakeholders, is in transition from MOVE UP Phase 3 to Phase 4. Among the priorities based on several conversations, the stakeholders agreed to consider the need in taking a look at the following:

1. **Persevere in finalizing the Memoranda of Understanding between the Consortium and DSWD or DOLE.** This is a "low-hanging fruit" to shape the path of meaningful engagements. Other legal considerations such as Data Privacy Law will be addressed by this. This will also outline the coordination protocol.
2. **Explore small grants for actual prototyping of evolving concepts and innovative ideas with key partners**. DSWD and DOLE expressed that they lack funding for initiatives like this, it was recommended that MOVE UP Phase 4 would be in a better position to explore small grants to develop prototypes or co-evolve proofs of concepts.

3. **Meaningfully involve partners and players who were part of diving deep into the co-creation process.** The engagement was guided by Theory U (please refer to succeeding section), the process was designed for key partners and players to continuously co-create value in this engagement.

4. **Tighten up the Resilient Livelihood Validation Survey Tool and implement the validation survey in the next phase as a pre-cursor to any interventions**. The validation survey tool is a-co-created tool by both MOVE UP and DSWD to validate relevance and correctness of policy recommendations. Apart from validation, it is also considered as a tool that is expected to:

   4.1 Guide to know the prevailing understanding on livelihood resilience of community participants.
   4.2 Guide to know if elements of resilient livelihood embedded in the survey are acceptable to community participants
   4.3 Guide to determine learning needs of the community participants.
   4.4 Guide to outline a Livelihood Resilience Plan

CHAPTER I

MOVE UP URBAN RESILIENCY POLICY REVIEW APPROACH AND METHODOLOGY

A. SYSTEMS THINKING PRINCIPLES IN URBAN GOVERNANCE

1. Focusing on the intent of reviewing, recommending, and mainstreaming into policies or plans that would strengthen the urban resilience of the most vulnerable urban population through an improved ATS system, increased livelihood resilience, and institutionalized mechanisms and models of urban resilience, the conduct of urban resiliency policies/plans review and integration followed the **Systems Thinking[7] Principles in Urban Governance[8]** enumerated herein:

    b. **Recognition of Complex Realities**. Today's cities face dynamic[9], generative[10] and socially complex[11] problems that are difficult or "impossible'' to solve because of complex interdependencies. Non-linear way of analyzing policy was carried out.
    c. **Discarding Reductionism**. In the case of urban complex problems, leaders and stakeholders must discard the tendency to isolate specific urban problem from the complex urban systems in which they operate and must avoid treating observed symptoms instead of root or systemic causes.
    d. **Global City Perspective**. Global cities are interconnected through a number of elements such as politics, trade, commerce, culture, tourism, infrastructures, dwellings, financial markets, immigration, media, education, and climate action.
    e. **Local City Perspective**. Local cities are interconnected through elements such as physical space, policy, housing, financial markets, education, health, safety, transportation, media, communities, and more.
    f. **Systems Analysis Applied to Policy Review**. Using models that clarify assumptions, identify feedback loops, and monitor system behavior and ecological conditions can help policymakers better anticipate change, shape realistic plans, and craft precautionary public policies. Cities in a rapidly warming climate must prepare for larger storms, longer droughts, supply disruptions, and economic turmoil. These, in turn, ought

[7] Systems thinking was introduced by Peter M. Senge as a unique management approach in The Fifth Discipline: The Art and Practice of the Learning Organization (Senge, 1990). Senge focuses on solving complex management problems through understanding organizational systems and by changing systems—including the mental models of the problem solvers.
[8] Systems Thinking and the Future of Cities. https://www.resilience.org/stories/2014-05-30/systems-thinking-and-the-future-of-cities/
[9] Dynamic complex problem exists when cause and effect are distant in space and time
[10] Generative complex problem exists when disruptive patterns of changes are observed
[11] Socially complex problems exist when various stakeholders involved have different interests and perspectives

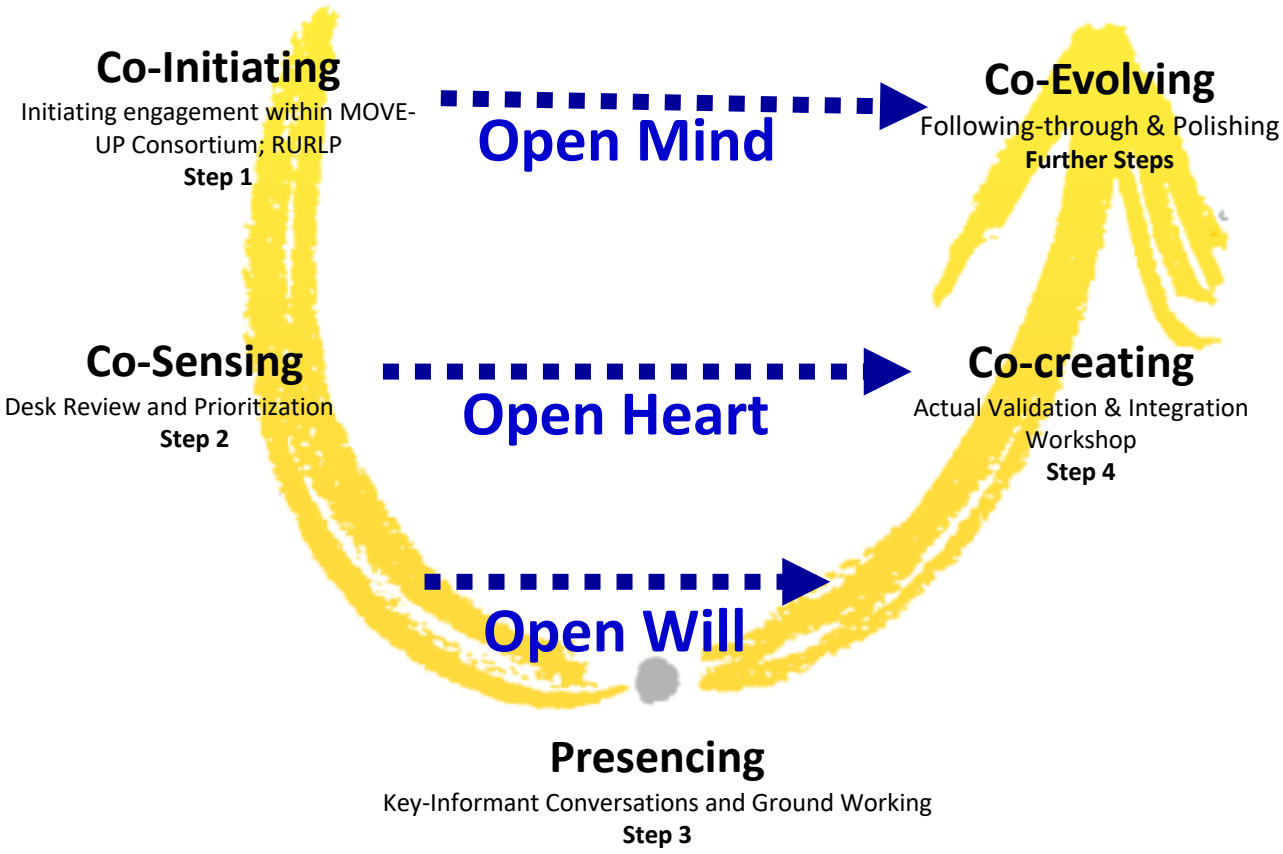

to affect decisions about zoning, land-use, location and type of infrastructure, building codes, food supply, economic development, taxation, and emergency preparedness.

g. **Systems Analysis Improves Organizational Behavior**. Rather than suppressing dissent, systems analysis can help to clarify the unexamined differences in beliefs embedded in competing paradigms and mental models. Systems analysis facilitate building organizational community around common visions.

B. THEORY U: ONE PROCESS, FIVE MOVEMENTS

The methodological approach in concretely applying Systems Thinking in the conduct of urban resiliency policies/plans review and integration together with the stakeholders was guided by the ***One Process, Five Movements***[12] of the Theory U Framework[13] by C. Otto Scharmer, as illustrated in Figure 1. The activities in each process are linked to the Work plan and Schedule in the succeeding section.

Figure 1. Theory U Applied in the Urban Resiliency Policy/Plans Review and Integration

[12] Scharmer, O. (2018). Theory U: One Process, Five Movements. MIT. USA.
[13] Scharmer, O. (2017). Addressing the Blind Spot of Our Time. Theory U: Leading from the Future as it Emerges. USA

a. **Co-Initiating.** At the beginning of the engagement, the Consortium, key personnel of the Consortium organization members shared insights, written and approved policies/plans, project documents and other related literature. Also, a communication line was established with the intention making the engagement effective and efficient. Professional rapport and relationships was established. Clarity of purpose, expected outputs, process to be used, and identifying people to be involved are few of the critical collaborative activities conducted. The context was clarified and it allowed the process of deep listening. In this stage, an OPEN MIND among stakeholders was established.

b. **Co-sensing**. One of the factors that was anticipated in the policy review was not lack of vision or ideas, but the ability to *sense*—that is, to see deeply, sharply, and collectively the context. When key stakeholders see together with depth and clarity, they become aware of their own collective potential. Analyzing policies and plans requires visiting the ground, talking with the people, and staying in touch with issues as they evolve. Without a direct link to the context of a situation, the Consortium would not learn to see and act effectively. The process of co-sensing led the Consortium as a whole saw the emerging opportunities. The activities conducted in this stage include Desk Review and submission of the same, discussion on the findings, prioritization of policies/plans to be validated, designing the key informant conversation and ground working tool. In this stage, an OPEN HEART among the Consortium was established.

c. **Presencing**. At the bottom of the U (deep dive), key personnel of the Consortium and or on the U journey come to a threshold that requires a "letting go" of everything that is not essential. While we drop the non-essential aspects of the self ("letting go"), we also open ourselves to new aspects of our highest possible future self ("letting come"). The essence of *presencing* is the experience of the coming in of the new and the transformation of the old. The decisive move to prioritize the policies to be reviewed and as subjects of validation, the conduct of key informant conversations and ground working, listening deeply to potential partners, and calibrating strategies were few of the activities conducted in this stage. In this stage an OPEN WILL among stakeholders was established.

d. **Co-creating**. The cornerstone of co-creation is ***prototyping***. Prototyping in this context refers to the drafting of MOU, open conversations on what works or not, co-creating criteria of sustainable and resilient livelihood, validating the policy recommendations,, how these will be integrated into existing plans/policies, and co-developing the Resilient Livelihood Validation Survey Tool were few of the activities in this stage. So, the prototype is not the stage that comes after the analysis. The prototype is part of the sensing and discovery process in which stakeholders explore the future by doing rather than by mere thinking and reflecting, thereby staying away from being stalled in "analysis paralysis." The co-creation movement of the U journey is an ability to execute core deliverables and outputs as model for future scaling-up or replication. It also results in widening the network of champions and change-makers who leverage their learning across prototypes and who help each other deal with whatever challenges they face.

e. **Co-evolving**. Once prototypes are developed and stakeholders can already feel the microcosms of emerging future, the next step is to do effective follow-through. And a review what has been learned is also needed, then decide which prototypes might have the highest impact on the system or situation at hand. Coming up with a sound assessment at this stage often requires the involvement of stakeholders from other institutions and sectors. The co-evolving movement results in an innovation ecosystem that connects high leverage prototype initiatives with the institutions and players that can help take it to the next level of piloting and scaling up.

2. To guide the stakeholders in its U journey, the Consortium came up with a Review of Related Urban Resiliency Laws and Policies (please see the next section). Concepts and frameworks from various researchers, articles, and published journals were studied. Applicable concepts and frameworks were refined to make it applicable to the context of the Philippines, Metro Manila, MOVE-UP Project Design, and program designs of key partners.

3. Step 3 or *presencing* onwards needed a collaborative framework to ensure effective and efficient validation processes from among the internal stakeholders of key partners.

C. APPRECIATIVE INQUIRY

1. the Consortium employed the Appreciative Inquiry as a main tool. Appreciative inquiry[14] is an approach which differs significantly from conventional managerial problem solving and typical organizational planning process.

2. The basic purpose of problem solving is that "organizing is a problem to be solved". Problem solving follows this process (1) identifying key problems, (2) analyzing the causes, (3) analyzing solutions, and (4) developing an action plan. In contrast, the underlying assumption of Appreciative Inquiry is that "organizing is a possibility to be embraced. It involves (1) appreciating the best of what is, (2) envisioning what might be, (3) dialoguing what should be, and (4) innovating what will be (see Table 1).

Table 1. Comparison of Problem-Solving Process and Appreciative Inquiry

Problem Solving Process	Appreciative Inquiry Process
(1) Identification of Problems	(1) Appreciating
↓	↓
(2) Analysis of Causes	(2) Envisioning what might be
↓	↓
(3) Analysis of Possible Solutions	(3) Dialoguing what should be
↓	↓
(4) Development of Action Plan	(4) Innovating what will be

Data Source: Appreciative Inquiry Primer (2006)

[14] Barbin, E. (2006). Appreciative Inquiry Primer.

3. Further, the following experiences were observed by stakeholders not knowing that AI was employed:
    - The process of discovering the best practices, best principles, and best policies. The discovery provided value to those factors that give motivations and give life to aspirations of key partners.
    - When the "best of what is" has been identified and valued, the next step was to co-develop criteria and identify areas for improvement – this gave an image of how the policies might look at some future point.
    - With appreciation for past accomplishments and with a view of the current reality as a foundation and a dream for what should be, the stakeholders started to engage an open dialogue.
    - The final step in the AI process is to construct the future through innovation and action. The assumption is, since stakeholders have been involved in the valuing, envisioning, and dialoguing process, they are expected to be committed and have a clear sense of where they are headed, thus will find innovative ways to help move the closer to the desired goals.

D. THE MOVE UP URBAN RESILIENCY MODEL

Figure 2. MOVE UP Framework to Strengthen Urban Resiliency

1. The MOVE UP Model is actually looking at itself as a contributory to and it serves as a catalyst in building urban resilience through capacity-building in the thematic components of Alternative Temporary Shelter, Resilient Livelihood, and Risk Transfer Mechanism which includes Social Protection. Participation, partnerships, and inclusion serve as the guiding principles in the project activities with various stakeholders that include the national and sub-national government, private organizations, non-governmental organizations, and civil society organizations.

2. At the **core of the MOVE UP Model is the vulnerable communities of men, women, children, elderly and persons with disabilities** (shown at the center of the framework in Figure 4). They are vulnerable because they are the one who have limited assets to bounce back after a disaster event. Vulnerability is closely linked to asset ownership. The more assets people have, the less vulnerable they are; the fewer the assets held by households, the greater their insecurity. The types of assets fall under the headings of labor; human capital—health, education, and skills; productive assets—often, the most important of these is housing; household relations; and social capital or social relations.

3. The **middle circle of the MOVE-UP Model illustrates its recognition of complex interdependent, interrelated realities and types of resiliency - social, economic, environment, institutional and infrastructural**. This is how MOVE-UP differentiates the types of resiliency:

    A. **Economic Resiliency** – is the capacity of an economy to reduce vulnerabilities, to resist to shocks and to recover quickly. Exploring the role of policies that mitigate both the risks and consequences of severe crises is the best way to strengthen economic resiliency.[15]
    B. **Environmental Resiliency** – is the ability of an ecosystem to continue functioning, recover, and maintain its normal patterns of nutrient cycling and biomass production after being subjected to damage caused by disturbance.[16]
    C. **Institutional Resiliency** – is the ability of institutions to recover after having undergone a significant disruption because they enforce regulative, normative, and cultural-cognitive elements that may remain even after a disaster.[17]
    D. **Infrastructure Resiliency** – resilient infrastructure is planned, designed, built and operated in a way that anticipates, prepares for, and adapts to changing climate conditions. It can also withstand, respond to, and recover rapidly from disruptions caused by severe climate conditions. Ensuring climate resilience is a continual process throughout the life of the asset.[18]
    E. **Social Resiliency** - society's ability to cope with a changing, sometimes hostile, environment by changing and readjusting in new and innovative ways. It is the ability to withstand adversity with peoples' values and institutions remaining intact. This definition has two key components: the motivational component refers to persons' willingness to mobilize for and to contribute to the common good, to forego or sacrifice, temporarily, individual aspirations, to help the collective achieve its goals; the second component refers to the ability to cope

with actual or potential threats while maintaining a reasonable level of orderly functioning.[19]

4. The **larger outer circle of the MOVE UP Model illustrates three major interventions in strengthening urban resiliency** – Building Resilience Capacities, Improving Social Relations, and Creating an Enabling Environment.

   A. **Building resilience capacities**. Capacity-building should not solely be in the form of trainings but also in the form of development, enhancement and standardization of tools and templates that would support the effective implementation and replication of the project. In the MOVE UP model and process, building resilience among the urban poor begins with awareness and culminates in a change in mindset. Community members mention awareness building, skills training, mentoring and coaching as important building blocks for resilience. The opportunity to learn building back better strategies is always acknowledged by the community. Through the synergy of the project consortium and in partnership with city governments and private institutions, the project aims that all city vulnerable communities build their resilience capacities focusing on the institutionalization of mechanisms in alternative temporary shelter, resilient livelihoods and risk transfer mechanisms. Through the various project activities – planning, assessing, data-gathering, designing models, implementing – MOVE UP seeks to build disaster risk reduction capacities of vulnerable communities including anticipating, absorbing, adapting, and transforming themselves into resilient communities.
   B. **Creating an enabling environment.** An enabling environment to strengthen increasing, building, strengthen resilience into an urban system or vulnerable communities, will typically in a form of policies and programs on economic, social, infrastructural, and institutional development to build urban resiliency.
   C. **Improving social relations.** MOVE-UP aims at involving all the stakeholders in the whole process of building strengthening urban resilience. Cooperation among different systems/actors is crucial for ensuring resiliency in face of sudden and slow-moving threats. Cooperation of different stakeholders and among institutions (multi-level governance) is required. Closely related to the concept of cooperation is the need to establish formal and informal networks within organizations, institutions and communities. Adger (2003) argues that environmental management and climate adaptation are strongly dependent on "networks and flows of information between individuals and groups" and an increasing number of studies highlight the key role of social networks in the post-disaster recovery (Nelson et al., 2007). The level of cohesion within a community largely affects both the communication and sharing of experience and the preservation of memory. It can be significantly increased through policies aimed at promoting an active participation of citizens, notably of most vulnerable groups, to community life and to decision-making processes.

[19] Friedland, N. (2005), "The Elusive Concept of Social Resilience", Samuel Neaman Institute for Advanced Studies in Science and Technology, Israel, https://www.neaman.org.il/Files/1-134_החברתי%20החוסן.pdf.

E. A FRAMEWORK FOR URBAN RESILIENCY POLICY/PLAN REVIEW AND INTEGRATING POLICY RECOMMENDATIONS

1. Drawn from the MOVE-UP Resiliency Model, Figure 3 is an illustration of a framework on reviewing urban resiliency policy/plan **focusing on the vulnerable communities (shown at the center of the Framework)**. Just like in Figure 2, such a framework embraces an idea of resilience as a process characterized by a network of complex interdependent and interrelated aspects of resiliency on **social, economic, environment, institutional and infrastructural** (illustrated by the middle circle).

2. Before coming up or enhancing a sub-national and/or city level policy/plan that could build resilience capacities; create an enabling environment; and improve social relations, social inclusion and empowerment, it has to consider **international and national trends, threats and hazards as shown by the broken arrows outside the larger circle in Figure 3.** In recent years, several studies have focused on coastal megacities, as they concentrate a significant part of the world' human population and critical economic assets in potentially hazardous locations.[20] Metro Manila is one of these, megacities, where even a "regular" disaster affect a large number of populations.[21] The rapid pace of urbanization, coupled with an ever-increasing population burden, has significantly increased the overall vulnerability of urban agglomerations to natural disasters. As a direct effect of climate change, the frequency and intensity of extreme weather events have also increased in recent years. The need for urban resilience strategy not just for Metro Manila but for the entire Philippines has been underscored by a series of hydro-meteorological disasters.[22]

3. The **three boxes outside the larger circle illustrates the process of policy/plan review, gaps analysis, and policy recommendations**. Each box contains outputs aimed at directly contributing to the *three major interventions* in strengthening urban resiliency prescribed by the MOVE UP Urban Resiliency Model – Building Resilience Capacities, Improving Social Relations, and Creating an Enabling Environment. Specifically, it is apparent in this review process that it always includes the intention of looking at how the MOVE UP thematic components (Alternative Temporary Shelter, Resilient Livelihood with Risk Transfer Mechanism including Social Protection) are considered or aligned.

4. Instead of labeling the *three major interventions* as such, the framework suggests that these would be the concrete outputs of the policy/plan review, gaps analysis, and policy recommendations (labels as shown in the larger circle) – now these are labelled the categories of integrated **Policies/Plans recommendations on Building Resilience Capacities, Improving Social Relations, and Creating an Enabling Environment** that shall reflect on specific policy/plan like DILG Department Orders and Memorandum Circulars, DSWD Memorandum Circulars related disaster response and management, DOLE Department Order on Livelihood, among others. Again, the MOVE UP thematic components of Alternative Temporary Shelter, Resilient Livelihood, and Risk Transfer Mechanism which includes Social Protection are considered it the policy/plan integration process.

CHAPTER II

REVIEW OF RELATED URBAN RESILIENCY LAWS AND POLICIES

A. BACKGROUND: URBAN POVERTY AND DISASTER RISKS IN METROPOLITAN MANILA

1. Key Urban Development Challenge in Metropolitan Manila

1.1 Metropolitan Manila, also known as the Philippines' National Capital Region, is the country's political and economic center. The economic and social opportunities it offers have encouraged local and foreign investors to put up businesses in it. Also, said opportunities propelled residents in other parts of the country to dwell in Metropolitan Manila in pursuit of a better living conditions[23]. That said, it plays a pivotal role in Philippine development. A World Bank report shows that, although it only covers less than 4 per cent of the country's territory, it accounts for 30 per cent of the Philippines total population and 50 per cent of the country's economic output[24]. Same report also indicates that the country's economic growth is concentrated in Metropolitan Manila, which accounts for 36 per cent of the Gross Development Product (GDP) in 2012[25].

1.2 Asian cities, including those within Metropolitan Manila, are highly exposed to the impacts of climate change, natural disasters, pandemics and other types of hazards. The Philippine economy is projected to lose between PHP276.3 billion and PHP2.5 trillion, due to coronavirus pandemic.[26] Sectors from retail, real estate, to manufacturing are experiencing serious challenges due to quarantine arrangements. Over 2 million employees were displaced during the first five weeks of the Luzon-wide ECQ wherein about 70% of this were affected by temporary business closures and 30% employees were subject to alternative work arrangements such as reduced working days and hours; forced leave; and work-from-home.[27]

2. The Impacts of COVID-19 Pandemic, Disasters and Climate Change Exacerbate Urban Poverty

2.1 The Urban Sector Assessment, Strategy and Road Map report produced by ADB underscores "a very large segment of the urban population is just above the poverty line and extremely vulnerable to slipping back into poverty (ADB 2012)[28]. A World Bank document claims that poverty in the Philippines is a consequence of having low income jobs rather than having no job at all. Based on the January 2016 data, the rate of urban unemployment was at 6 per cent while urban underemployment reached 21 per cent. Nearly 30 % of wage workers earn

---

[23] The United Nation's World Urbanization Prospects report notes that in 2010, the urban population of the Philippines reached 45.3 million that is equivalent to 48.6 per cent of the population that year.

[26] (https://www.bworldonline.com/impact-of-covid-19-on-key-philippine-economic-sectors/).

[27] https://www.flandersinvestmentandtrade.com/export/nieuws/coronavirus-situation-philippines

[28] Ibid.

less than two-thirds of the median wage[29]. The report further shows that poverty line is Php 7,821 per month for a family with five members. This is similar to the USD 1.25 per day per capita in the international poverty line[30].

2.2 The people's vulnerability and exposure to risks in Metro Manila were clearly stressed as the COVID-19 continue to stifle all aspects of the people's lives. With this experience and from previous disasters, it is clear that the poor and vulnerable groups are mainly the one that bear the brunt of the impacts of disasters due to their limited sources of income, nonexistent savings, limited assets, and less access to risk management instruments that can allow them to deal and adapt with risks (SPVAM, DSWD 2014).

2.3 Despite the action of the Philippine government to pour PHP1.49 trillion (7.8% of the country's GDP) for the 4-pillar socioeconomic strategy to fight or recover from the COVID-19 pandemic, it is projected that the fruits of such strategy will not translate[31] to inclusive growth, strengthened resilience and better recovery. The country lacks the institutional arrangements and human capital to advance DRR and resilience agenda, more so in the face of the COVID-19 pandemic.

B. REVIEW OF RELATED POLICY FRAMEWORKS AND PLANS

1. Policy is defined as the statement of whatever the government chooses to do or not to do to address a public problem (Birkland 2011: 9; Anderson 2011: 6; Kraft et al., 2007: 5- 6; Anderson 2006: 5; Colebatch 2002: 10). Colebatch (2002) held that it is a mechanism by which we organize our lives that shapes our living. Policies are ubiquitous (Anderson 2011: 1). They take the form of texts, practices, symbols and discourses (Schneider and Ingram: as cited in Birkland 2011: 9). Policies have significant consequences in people's well-being and happiness, may either be advantageous or disadvantageous, and cause pleasure, irritation, or pain (Anderson 2011:1).

2. This section presents significant international, regional, and national policy frameworks and plans that govern our day-to-day living. These policy frameworks and plans primarily set priorities and guidance on urban resiliency, disaster risk reduction, and climate change adaptation. Portions of these policies and plans advance social protection polices for the vulnerable, marginalized and poor communities.

3. Each country adopts the definition of social protection (SP) that is influenced by its specific challenges and historical developments. In 2007, the Republic of the Philippines adopted a national definition and framework for SP. The definition adopted was "*Policies and programs that seek to reduce poverty and vulnerability to risks and enhance the social status of and rights of marginalized groups by promoting and protecting livelihood and employment, protecting against hazards and sudden loss of income, and improving people's capacity to manage risk.*"[32] Social protection has three pillars: social assistance, social insurance, and labor market interventions.

[29] Singh, Gayatri and Gadgil, Gauri (2017). *Navigating Informality: Perils and Prospects in Metro Manila's Slums.* World Bank. Washington DC. pp x

[30] Mathur, P. (2014). Urban Poverty in Asia. (Asian Development Bank: Mandaluyong City), pp 45

[32] Social Development Committee of Cabinet (SDC) Resolution No. 1 Series of 2007.

4. Labor market interventions especially entrepreneurship and livelihood programs are considered productive inclusion and participation. Livelihood interventions in these significant international, regional, and national policy frameworks are directed to become sustainable and resilient.

INTERNATIONAL AND REGIONAL CONVENTIONS

1. SUSTAINABLE DEVELOPMENT GOALS (SDGS)

1.1. In September 2015, UN member States signed a new development agenda, *Transforming our World: The 2030 Agenda for Sustainable Development* (Agenda 2030), to eradicate poverty, improve the living standards and well-being of all people, promote peace and more inclusive societies and reverse the trend of environmental degradation to be achieved by all countries and stakeholders by 2030.

1.2 The SDGs are part of a history of multilateral efforts to shift the world into sustainable and resilient nations. The 1972 United Nations (UN) World Conference on the Human Environment in Stockholm planted an idea that has evolved into the SDGs we have today. The phrase "sustainable development" was adopted and popularized in 1987, in the report of the United Nations Commission on Environment and Development. The Brundtland Commission provided a definition of sustainable development that was used for the next 25 years: *"development that meets the needs of the present without compromising the ability of future generations to meet their own needs."*

1.3 This concept of sustainable development was adopted at the 1992 UN Conference on Environment & Development in Rio de Janeiro. Over time, the definition of sustainable development has evolved to capture a more holistic approach, linking the three dimensions of sustainable development: economic development, social inclusion, and environmental sustainability. This three-part vision of sustainable development was emphasized at the 2012 Rio+20 Conference. The SDGs aim to provide a global framework for cooperation to address the three dimensions of sustainable development within an ethical framework based on: (1) the right to development for every country, (2) human rights and social inclusion, (3) convergence of living standards across countries, and (4) shared responsibilities and opportunities.
[33]

1.4 There are 17 overall goals in the SDGs which cover a spectrum of development issues, distributed in 169 targets intending to be more specific, guiding immediate action and concrete measures to achieve the goals.[34] Table 2 presents all the direct and indirectly related provisions of SDGs in ensuring sustainable and resilient livelihood, RTM and ATS for vulnerable communities. In this table, the terms Goal and Target are represented by G and T, respectively.

Table 2. Related Provisions of SDGs Ensuring Resilient Livelihood, RTM and ATS

G1	End poverty in all its f	**Data Source: UNSSC Knowledge Centre for Sustainable Development (2017)**
T1.3	Implement nationally appropriate social protection systems and measures…and achieve substantial coverage of the poor and the vulnerable.	

[33] Sustainable Development Solutions Network. 2015. Getting Started with the Sustainable Development Goals
[34] Sustainable Development Goals Report. 2016.

T1.4	…in particular the poor and the vulnerable, have equal rights to economic resources, as well as access to basic services, ownership and control over land and other forms of property, inheritance, natural resources, appropriate new technology and financial services, including microfinance.
T1.5	…build the resilience of the poor and those in vulnerable situations and reduce their exposure and vulnerability to climate-related extreme events and other economic, social and environmental shocks and disasters.
T1. A	Ensure significant mobilization of resources from a variety of sources, including through enhanced development cooperation…to implement programs and policies to end poverty in all its dimensions.
T1. B	Create sound policy frameworks at the national, regional and international levels, based on pro-poor and gender-sensitive development strategies, to support accelerated investment in poverty eradication actions.
G3	Ensure healthy lives and promote well-being for all at all ages
T3.4	…and promote mental health and well-being.
T3.8	Achieve universal health coverage, including financial risk protection…
G4	Ensure inclusive and equitable quality education and promote life-long learning opportunities for all
T4.4	Substantially increase the number of youth and adults who have relevant skills, including technical and vocational skills, … and entrepreneurship (T4.4)
G5	Achieve gender equality and empower all women and girls
T5.C	Adopt and strengthen sound policies and enforceable legislation for the promotion of gender equality and the empowerment of all women and girls at all levels (T5.C)
G8	Promote sustained, inclusive and sustainable economic growth…
T8.3	Promote development-oriented policies that support productive activities, decent job creation, entrepreneurship, creativity and innovation, and encourage the formalization and growth of micro-, small- and medium-sized enterprises, including through access to financial service.
T8.8	Protect labor rights and promote safe and secure working environments for all workers… (T8.8)
G9	Build resilient infrastructure, promote inclusive and sustainable industrialization and innovation
T9.1	Develop quality, reliable, sustainable and resilient infrastructure…to support economic development and human well-being, with a focus on affordable and equitable access for all.
T9.3	Increase the access of small-scale industrial and other enterprises…to financial services, including affordable credit, and their integration into value chains and markets.
G10	Reduce Inequality
T10.1	…progressively achieve and sustain income growth of the bottom 40 per cent of the population at a rate higher than the national average.
T10.2	…empower and promote the social, economic and political inclusion of all, irrespective of age, sex, disability, race, ethnicity, origin, religion or economic or other status.
T10.3	Ensure equal opportunity and reduce inequalities of outcome, including by eliminating discriminatory laws, policies and practices and promoting appropriate legislation, policies and action in this regard.
T10.4	Adopt policies, especially fiscal, wage and social protection policies, and progressively achieve greater equality.
G11	Make human settlements more inclusive, safe, resilient, and sustainable
T11.3	…enhance inclusive and sustainable urbanization and capacity for participatory, integrated and sustainable human settlement planning and management … (
T11.5	…significantly reduce the number of deaths and the number of people affected and substantially decrease the direct economic losses…caused by disasters, including water-related disasters, with a focus on protecting the poor and people in vulnerable situations.
G12	Ensure sustainable consumption and production patterns

T12.2	…achieve the sustainable management and efficient use of natural resources.
T12.8	… ensure that people everywhere have the relevant information and awareness for sustainable development and lifestyles in harmony with nature.
G13	Take urgent action to combat climate change and its impacts
T13.1	Strengthen resilience and adaptive capacity to climate-related hazards and natural disasters…
T13.2	Integrate climate change measures into national policies, strategies and planning
T13.3	Improve education, awareness-raising and human and institutional capacity on climate change mitigation, adaptation, impact reduction and early warning
T13.B	Promote mechanisms for raising capacity for effective climate change-related planning and management…focusing on women, youth and local and marginalized communities.
G16	Promote peaceful and inclusive societies
T16.3	Promote the rule of law at the national and international levels and ensure equal access to justice for all.
T16.5	Substantially reduce corruption and bribery in all their forms.
T16.6	Develop effective, accountable and transparent institutions at all levels.
T16.7	Ensure responsive, inclusive, participatory and representative decision-making at all level.
G17	Partnership for the Goals
T17.8	Fully operationalize the technology bank and science, technology and innovation capacity-building mechanism…and enhance the use of enabling technology, in particular information and communications technology.
T17.4	Enhance policy coherence for sustainable development.
T17.7	Encourage and promote effective public, public-private and civil society partnerships, building on the experience and resourcing strategies of partnerships.

1.5 The SDGs coincided with another historic agreement reached in 2015 at the COP21 Paris Climate Conference. Together with the Sendai Framework for Disaster Risk Reduction, signed in Japan in March 2015, these agreements provide a set of common standards and achievable targets to reduce carbon emissions, manage the risks of climate change and natural disasters, and to build back better after a crisis.

2. SENDAI FRAMEWORK FOR DISASTER RISK REDUCTION (SFDRR)

2.1 The SFDRR replaced the Hyogo Framework for Action (HFA) as the global blueprint on disaster risk reduction. SFDRR has seven (7) global targets, namely:

2.1.1 Substantially reduce global disaster mortality by 2030.
2.1.2 Substantially reduce the number of affected people globally by 2030.
2.1.3 Reduce direct disaster economic loss
2.1.4 Substantially reduce disaster damage to critical infrastructure and disruption of basic services.
2.1.5 Substantially increase the number of countries with national and local disaster risk reduction strategies by 2020.
2.1.6 Substantially enhance international cooperation to developing countries.
2.1.7 Substantially increase the availability of and access to multi-hazard early warning systems and disaster risk information and assessments to the people by 2030.

2.2 Also, it has four (4) priority areas: (1) Understanding disaster risk; (2) Strengthening disaster risk governance to manage disaster risk; (3) Investing in disaster risk reduction for resilience; and, (4) Enhancing disaster preparedness for effective response, and to "Build Back Better" in recovery, rehabilitation and reconstruction.

Table 3. SFDRR Related Provisions Ensuring Sustainable and Resilient Livelihood, RTM and ATS

Livelihood	The substantial reduction of disaster risk and losses in lives, **livelihoods** and health and in the economic, physical, social, cultural and environmental assets of persons, businesses, communities and countries. It is urgent and critical to anticipate, plan for and reduce disaster risk in order to more effectively protect persons, communities and countries, their **livelihoods**, health, cultural heritage, socioeconomic assets and ecosystems, and thus strengthen their resilience. **Guiding Principles** ▪ Managing the risk of disasters is aimed at protecting persons and their property, health**, livelihoods** and productive assets, as well as cultural and environmental assets, while promoting and protecting all human rights, including the right to development; **National and local level** To strengthen the design and implementation of inclusive policies and social safety-net mechanisms, including through community involvement, integrated with **livelihood** enhancement programs, and access to basic health-care services, including maternal, newborn and child health, sexual and reproductive health, food security and nutrition, housing and education, towards the eradication of poverty, to find durable solutions in the post-disaster phase and to empower and assist people disproportionately affected by disasters;

	▪ To increase business resilience and protection of **livelihoods** and productive assets throughout the supply chains, ensure continuity of services and integrate disaster risk management into business models and practices; ▪ To strengthen the protection of **livelihoods** and productive assets, including livestock, working animals, tools and seeds. **Global and regional levels** ▪ To promote and support the development of social safety nets as disaster risk reduction measures linked to and integrated with **livelihood** enhancement programmes in order to ensure resilience to shocks at the household and community levels; **Role of Stakeholders** ▪ Women and their participation are critical to effectively managing disaster risk and designing, resourcing and implementing gender-sensitive disaster risk reduction policies, plans and programmes; and adequate capacity building measures need to be taken to empower women for preparedness as well as to build their capacity to secure alternate means of **livelihood** in post-disaster situations; **International cooperation and global partnerships** ▪ African countries continue to face challenges related to disasters and increasing risks, including those related to enhancing resilience of infrastructure, health and **livelihoods.** These challenges require increased international cooperation and the provision of adequate support to African countries to allow for the implementation of the present Framework.
Risk Transfer	**National and local levels** To promote mechanisms for disaster **risk transfer** and insurance, risk-sharing and retention and financial protection, as appropriate, for both public and private investment in order to reduce the financial impact of disasters on Governments and societies, in urban and rural areas; **Global and regional levels** To promote the development and strengthening of disaster **risk transfer** and sharing mechanisms and instruments in close cooperation with partners in the international community, business, international financial institutions and other relevant stakeholders;
Shelter	**National and local levels** To promote regular disaster preparedness, response and recovery exercises, including evacuation drills, training and the establishment of area-based support systems, with a view to ensuring rapid and effective response to disasters and related displacement, including access to safe **shelter**, essential food and non-food relief supplies, as appropriate to local needs;
Urban	**Hyogo Framework for Action: lessons learned, gaps identified and future challenges** ▪ Enhanced work to reduce exposure and vulnerability, thus preventing the creation of new disaster risks, and accountability for disaster risk creation are needed at all levels. More dedicated action needs to be focused on tackling underlying disaster risk drivers, such as the consequences of poverty and inequality, climate change and variability, unplanned and rapid urbanization, poor land management and compounding factors such as demographic change, weak institutional arrangements, non-risk-informed policies, lack of regulation and incentives for private disaster risk

	reduction investment, complex supply chains, limited availability of technology, unsustainable uses of natural resources, declining ecosystems, pandemics and epidemics. Moreover, it is necessary to continue strengthening good governance in disaster risk reduction strategies at the national, regional and global levels and improving preparedness and national coordination for disaster response, rehabilitation and reconstruction, and to use post-disaster recovery and reconstruction to "Build Back Better", supported by strengthened modalities of international cooperation. **National and local levels** To encourage the establishment of necessary mechanisms and incentives to ensure high levels of compliance with the existing safety-enhancing provisions of sectoral laws and regulations, including those addressing land use and urban planning, building codes, environmental and resource management and health and safety standards, and update them, where needed, to ensure an adequate focus on disaster risk management; To promote mechanisms for disaster risk transfer and insurance, risk-sharing and retention and financial protection, as appropriate, for both public and private investment in order to reduce the financial impact of disasters on Governments and societies, in urban and rural areas; To promote the mainstreaming of disaster risk assessments into land-use policy development and implementation, including urban planning, land degradation assessments and informal and non-permanent housing, and the use of guidelines and follow-up tools informed by anticipated demographic and environmental changes; **Means of implementation** ▪ To incorporate disaster risk reduction measures into multilateral and bilateral development assistance programmes within and across all sectors, as appropriate, related to poverty reduction, sustainable development, natural resource management, the environment, urban development and adaptation to climate change.

3. ASIA PACIFIC ECONOMIC COOPERATION (APEC) DRR FRAMEWORK

3.2 Adopted in 2015, The APEC Disaster Risk Reduction Framework aims to contribute to adaptive and disaster-resilient Asia-Pacific economies that can support inclusive and sustainable development in the face of disasters and the "new normal". The core of this Framework is the clear recognition that addressing the impacts of disasters requires holistic, more proactive, multi-stakeholder, multi-sectoral and strategic interventions to make our economies more resilient. Table 4 presents related provisions of APEDRR to ensure sustainable and resilient livelihood.

Table 4. APECDRR Framework to Related Provisions Ensuring Sustainable and Resilient Livelihood and RTM

Risk transfer	Areas for collaboration Facilitation of the establishment of appropriate mechanisms and tools to finance investments in prevention, mitigation and risk transfer, in collaboration with the private sector, particularly the capital markets and insurance industry.

Livelihood	**Prevention and Mitigation.** This pillar includes the identification and evaluation of existing hazards, vulnerabilities, and exposure of communities and livelihoods. Based on the identified hazards and risk evaluation, proactive structural and non-structural measures need to be identified, evaluated, prioritized, funded and undertaken to mitigate the impact of disasters. **Preparedness.** This pillar pertains to the series of multi-sectoral and multi-level measures that help ensure and enhance the state of readiness of APEC economic systems and communities as the pillar's main goals minimizing damage to infrastructure and property and enhancing capacity to build back better. Preparedness harnesses regional cooperation to strengthen early warning mechanisms for transboundary hazards in the region such as tsunamis and typhoons. This pillar focuses on establishing and strengthening the capacities of communities to anticipate, cope, and recover from the negative impacts of disasters. It involves enhancing urban and rural planning using risk and hazard mapping techniques and information, and strengthening critical infrastructure, including social and cultural infrastructure. It involves cooperation between government and businesses to increase the resilience of supply chains. It includes utilizing current and advanced Information and Communications Technologies for comprehensive disaster management system. It also includes the development and promotion of financial tools, such as microinsurance and catastrophic risk insurance, to help protect households, Micro, Small, Medium Enterprises (MSMEs), livelihoods such as agriculture, critical infrastructure, and communities from the financial and economic losses that each disaster brings, and promotion of business continuity planning.
Urban	**Preparedness.** This pillar pertains to the series of multi-sectoral and multi-level measures that help ensure and enhance the state of readiness of APEC economic systems and communities as the pillar's main goals minimizing damage to infrastructure and property and enhancing capacity to build back better. Preparedness harnesses regional cooperation to strengthen early warning mechanisms for transboundary hazards in the region such as tsunamis and typhoons. This pillar focuses on establishing and strengthening the capacities of communities to anticipate, cope, and recover from the negative impacts of disasters. It involves enhancing urban and rural planning using risk and hazard mapping techniques and information, and strengthening critical infrastructure, including social and cultural infrastructure. It involves cooperation between government and businesses to increase the resilience of supply chains. It includes utilizing current and advanced Information and Communications Technologies for comprehensive disaster management system. It also includes the development and promotion of financial tools, such as microinsurance and catastrophic risk insurance, to help protect households, Micro, Small, Medium Enterprises (MSMEs), livelihoods such as agriculture, critical infrastructure, and communities from the financial and economic losses that each disaster brings, and promotion of business continuity planning.

4. NEW URBAN AGENDA

4.1 Adopted at the United Nations Conference on Housing and Sustainable Urban Development (Habitat III) in Quito, Ecuador, on 20 October 2016. The New Urban Agenda was endorsed by the United Nations General Assembly at its sixty-eighth plenary meeting of the seventy-first session on 23 December 2016. It represents a shared vision for a better and more sustainable future. If well-planned and well-managed, urbanization can be a powerful tool for sustainable

development for both developing and developed countries. Table 5 presents related provisions of New Urban Agenda to ensure sustainable and resilient livelihood.

Table 5. Related Provisions to Ensuring Sustainable and Resilient Livelihood and RTM

Risk transfer mechanisms	Means of implementation We will support the creation of robust legal and regulatory frameworks for sustainable national and municipal borrowing, on the basis of sustainable debt management, supported by adequate revenues and capacities, by means of local creditworthiness as well as expanded sustainable municipal debt markets when appropriate. We will consider the establishment of appropriate financial intermediaries for urban financing, such as regional, national, subnational and local development funds or development banks, including pooled financing mechanisms, which can catalyse public and private, national and international financing. We will work to promote risk mitigation mechanisms such as the Multilateral Investment Guarantee Agency, while managing currency risk, to reduce the cost of capital and to stimulate the private sector and households to participate in sustainable urban development and resilience-building efforts, including access to risk transfer mechanisms.
Livelihood	**Vision** ▪ The New Urban Agenda incorporates a new recognition of the correlation between good urbanization and development. It underlines the linkages between good urbanization and job creation, livelihood opportunities, and improved quality of life, which should be included in every urban renewal policy and strategy. This further highlights the connection between the New Urban Agenda and the 2030 Agenda for Sustainable Development, especially Goal 11 on sustainable cities and communities. ▪ Fulfil their social function, including the social and ecological function of land, with a view to progressively achieving the full realization of the right to adequate housing as a component of the right to an adequate standard of living, without discrimination, universal access to safe and affordable drinking water and sanitation, as well as equal access for all to public goods and quality services in areas such as food security and nutrition, health, education, infrastructure, mobility and transportation, energy, air quality and livelihoods; **Sustainable and inclusive urban prosperity and opportunities for all** ▪ We commit ourselves to developing vibrant, sustainable and inclusive urban economies, building on endogenous potential, competitive advantages, cultural heritage and local resources, as well as resource-efficient and resilient infrastructure, promoting sustainable and inclusive industrial development and sustainable consumption and production patterns and fostering an enabling environment for businesses and innovation, as well as livelihoods. ▪ We commit ourselves to promoting safe, inclusive, accessible, green and quality public spaces as drivers of social and economic development, in order to sustainably leverage their potential to generate increased social and economic value, including property value, and to facilitate business and public and private investments and livelihood opportunities for all. ▪ We commit ourselves to increasing economic productivity, as appropriate,

NEW URBAN AGENDA

	by providing the labour force with access to income-earning opportunities, knowledge, skills and educational facilities that contribute to an innovative and competitive urban economy. We also commit ourselves to increasing economic productivity through the promotion of full and productive employment and decent work and livelihood opportunities in cities and human settlements. ▪ We commit ourselves to promoting, as appropriate, full and productive employment, decent work for all and livelihood opportunities in cities and human settlements, with special attention to the needs and potential of women, youth, persons with disabilities, indigenous peoples and local communities, refugees, and internally displaced persons and migrants, particularly the poorest and those in vulnerable situations, and to promote non-discriminatory access to legal income-earning opportunities.

Figure. 4 Linkage Between New Urban Agenda and SDGs

NATIONAL-LEVEL POLICIES

1. PHILIPPINE DEVELOPMENT PLAN 2017-2022

The PDP 2017-2022 lays down the foundation for the 25-year plan of the Philippines. It has four strategic areas: (1) building prosperous, predominantly middle-class society where no one is poor; (2) promoting a long and healthy life; (3) becoming smarter and more innovative; and, (4) building

a high trust society. Table 5 presents related provisions of PDP to ensure sustainable and resilient livelihood.

Table 5. Related Provisions to Ensuring Sustainable and Resilient Livelihood, ATS and RTM

Urban	**Building safe and secure communities** By 2022, Filipinos will have access to affordable, adequate, safe, and secure housing in well-planned communities. There will be proper delineation of roles and mandates of housing agencies, which will lead to efficient provision of direct and indirect housing assistance and effective urban planning. Housing targets are provided in Tables 12.3 to 12.5 of the full PDP 2017-2022 document. **Strategies** ▪ Strengthen decentralization of housing and urban development interventions.
Livelihood	**Reducing vulnerability of individuals and families** ▪ Provide adequate transition houses and livelihood opportunities for disaster victims during early rehabilitation and recovery period.
Risk transfer mechanisms	**Reducing vulnerability of individuals and families** ▪ Develop facilities for adaptation in local communities including risk transfer mechanisms.
Temporary shelters	**Reducing vulnerability of individuals and families** ▪ Provide adequate transition houses and livelihood opportunities for disaster victims during early rehabilitation and recovery period.

2. NATIONAL DISASTER RISK REDUCTION AND MANAGEMENT PLAN 2011-2028

2.1 To operationalize the NDRRMF, the Office of Civil Defense led the development of the National DRRM Plan 2011-2028 which was then adopted by the National DRRM Council. The NDRRMP is the roadmap towards the realization of the NDRRMF vision and it aimed to do so through its 14 objectives, 24 outcomes, 56 outputs and 93 activities.

2.2 The NDRRMP likewise identified three timelines for the implementation of its activities – Short Term 2011-2013; Medium Term 2014-2016; and Long Term 2017-2028. The timelines coincided with the commitments under the Millennium Development Goals and the Hyogo Framework for Action and the Philippine Development Plan 2011-2016. The long-term activities and projects are expected to be completed at the same time as the National Climate Change Action Plan to reinforce the convergence of the two plans.

2.3 The NDRRMP is a road map on how, through DRRM, the country will be able to achieve gender-responsive and rights-based sustainable development. It emphasized the following:

- Need for institutionalizing DRRM policies, structures, coordination mechanisms and programs with continuing budget appropriation on DRR from national down to local levels;
- Importance of mainstreaming DRRM and CCA in the development planning processes particularly in the areas of environment, agriculture, water, energy, health, education, land-use and urban planning, among others;

- Competency and science-based capacity strengthening activities alongside the action-based learning through knowledge development and management of good DRRM practices on the ground;
- Inclusion of human-induced disasters that result in displacement of people, loss of lives, destruction of property and sometimes, socio-political instability. Encompassing conflict resolution approaches, the plan seeks to mainstream DRRM into the peace process
- Principles of good governance, environmental protection and inclusive participation of civil society organizations including the private sector.

The NDRRMP 2011-2028 Thematic Areas and its Vision
Data Source: NDRRM Plan (2011)

2.4 Since its approval, the implementation of the activities under each DRRM Aspect were steered by the four vice-chairpersons who were likewise the lead of these four areas – the Department of Science and Technology for Prevention and Mitigation; Department of Interior and Local Government for Preparedness; Department of Social Welfare and Development of Response; and the National Economic Development Authority for Rehabilitation and Recovery. Table 6 presents related provisions of NDRRM Plan to ensure sustainable and resilient livelihood.

Table 6. NDRRM Plan Related Provisions Ensuring Sustainable and Resilient Livelihood, ATS and RTM

Urban	It also highlights the importance of mainstreaming DRRM and CCA in the development processes such as policy formulation, socioeconomic development planning, budgeting and governance particularly in the area of environment, agriculture, water, energy, health, education, poverty reduction, land-use and urban planning and public infrastructure and housing among others. Mainstreaming also puts to forth the need to develop common tools to analyze the various hazards and vulnerability factors which put our communities and people into harms way. **Prevention and mitigation** **Increased disaster resilience of infrastructure systems** ▪ Urban disasters are among the country's growing concerns in DRRM. With the exponential increase of poor people living in highly congested urban

	communities surrounded by old, unstable and highly vulnerable buildings, attention to how risks can be reduced in horizontal and vertical infrastructure systems need to be emphasized.
Risk Transfer Mechanisms	Outcome 5: Communities access to effective and applicable disaster risk financing and insurance Outcome 23: Disaster and climate change-resilient and infrastructure reconstructed
Temporary shelters	Outcome 16: Temporary shelter needs are adequately addressed

3. NATIONAL CLIMATE CHANGE ACTION PLAN 2011 – 2028

The national climate change framework strategy has been translated into a National Climate Change Action Plan (NCCAP), which prioritizes food security, water sufficiency, ecological and environmental stability, human security, climate-smart industries and services, sustainable energy, and knowledge and capacity development as the strategic direction for 2011 to 2028.

Table 7. NCCAP Related Provisions to Ensuring Sustainable and Resilient Livelihood, RTM and ATS

Urban and Livelihood	Priority 5. Climate-friendly industries and services Outcome: NCCAP prioritizes the creation of green and eco-jobs and sustainable consumption and production. It also focuses on the development of sustainable cities and municipalities.
Risk Transfer Mechanism and ATS	Priority 4. Human Security Outcome: The objective of the human security agenda is to reduce the risks of women and men to climate change and disasters Immediate Outcome 3: climate change–adaptive human settlements and services developed, promoted and adopted. Priority 7. Knowledge and Capacity Development Outcome: The priorities of the NCCAP on knowledge and capacity development are: • Enhanced knowledge on the science of climate change; • Enhanced capacity for climate change adaptation, mitigation and disaster risk reduction at the local and community level; and • Established gendered climate change knowledge management accessible to all sectors at the national and local levels.

NATIONAL GOVERNMENT AGENCIES ISSUED GUIDELINES, DEPARTMENT ORDERS, ADMINISTRATIVE ORDERS AND MEMORANDUM CIRCULARS

There are three (3) government line agencies that issued department orders (DO) and memorandum circulars (MC) mandating subnational government agencies, local government units, and city communities to implement policies that are intricately linked to strengthening urban resiliency, DRRM, climate change adaptation, and to the MOVE UP thematic components of: resilient livelihood with risk transfer mechanisms and alternative temporary shelter. These agencies include Department of Interior and Local Government (DILG), Department of Social Welfare and Development (DSWD), and Department of Labor and Employment (DOLE). The PCUP and Insurance Commission are also among of the government offices with relevant polices that needs to be considered:

1. PRESIDENTIAL COMMISSION FOR URBAN POOR (PCUP) RESOLUTION NO. 1 SERIES OF 2018 ON CREATING THE TECHNICAL WORKING GROUP (TWG) FOR PURPOSES AND PROGRAMS FORMULATION RELATIVE TO CLIMATE CHANGE AND DISASTER RISK RESILIENT PROJECT FOR THE URBAN POOR AND APPROPRIATING FUNDS THEREOF

The policy aims to facilitate the formulation and implementation of a climate change and disaster risk resilient program to address the varying effects of climate change and disaster risk resilient program to address the varying effects of climate change to the **lives**, **property and livelihood** of the urban poor communities; to mainstream the Local Climate Change Action Plan (LCCAP), within the urban poor context that need to be considered in the different levels of plans, programs and projects of the Commission; to monitor, recommend ad assist the Shelter Agencies in the implementation of the Climate Change Adaptation and Mitigation Road Map: An Urban Poor Framework for the ISFs in the danger zones , riverbed, lakebed, informal settlers and resettlement sites of the country.

Table 7. PCUP Resolution No. 1 Series of 2018 Related Provisions to Ensuring Sustainable and Resilient Livelihood and RTM

1	The scope of work (pp2) includes awareness projects; community-based development project such as but not limited to applications/implementation of the renewable energy, rain catchment projects, community-based garden, community-based waste management program, edible landscape, mangrove/bamboo reforestation; capacity building to sectoral organization. LGUs, and CSOs; facilitate the implementation of "mass green housing project" using climate proof and climate change resilient building and facilities; and coordinate with the Field Operators Divisions in the implementation of the Climate Change and Disaster Risk Resilient Project for the Urban Poor.
2	It also covers mainstreaming and integrating sectoral issues of the urban poor to climate change action plans (LCCAP) to the respective local government units (LGU) base on the mandate stipulated under RA 9729 as amended.
3	Facilitate the conduct of vulnerability assessment (VAA)/Risk Vulnerability Area Assessments in the urban poor community.
4	The funding and other administrative requirements of the Climate Change and Disaster Risk Resilient Project for the Urban Poor – TWG will be charged to the regular budget of the Commission.
5	The TWG through the Secretariat and with the Office of the Chairman will link and access other funds available, such as Peoples Survival Funds, Green Climate Funds, and other discretionary funds of the government and form the private investors and funds from the private institution or civil society organization.

2. INSURANCE MEMORANDUM CIRCULAR 1-2010 ON REGULATIONS FOR THE PROVISION OF MICROINSURANCE PRODUCTS AND SERVIC

The Essentials of IMC No. 1-2010

It outlined the regulatory framework for Microinsurance as formulated by Insurance Commission in coordination with Department of Finance – National Credit Council, other regulatory authorities, associations of life insurance companies, non-life insurance companies, cooperative insurance societies, and mutual benefit associations.

It clearly specified the details of establishment of policy and regulatory environment that will facilitate increase participation of private sector in microinsurance and ensure that the benefits of the insured poor are protected.

Contains the various rules and regulations for the provision of microinsurance products and services, the basic definition of a microinsurance product, the features of a microinsurance policy contract, and who are allowed to sell microinsurance products.

There are other various Circulars issued by the Insurance Commission including Joint MC 1-2010, JMC 2-2010, JMC 3-2011, Circular 5, 6 -2011, Circular 5,7-2012. The issuance of the foregoing circulars led to the regulation of design and provision of insurance products that suit the needs and circumstances of the low-income sector. Aside from defining specific parameters for insurance providers, these circulars also described clear criteria for regulators to determine what microinsurance is for purposes of licensing, regulation, and supervision, hence promoting regulatory transparency. The highlights of these circulars and how these facilitate microinsurance cover affordability, shorter period for claims settlement, simple and easy-to-understand policy contracts, simple documentary requirements, increased options for distribution and tiered capitalization requirements.

Table 8. Difference Microinsurance and Traditional Insurance Product

Common Provisions for Individual/Group Insurance Plans	Traditional Insurance Products	Microinsurance Products
Maximum Premium	No limitation	5% of the current daily minimum wage rate in Metro Manila (P22.30 or $0.53) *
Maximum Benefit	No limitation	500 times the daily minimum wage rate in Metro Manila (P223,000 or $5,373)
Policy Contract	Full of complex conditions	Simple and easy to understand
Frequency of Premium Collection	Monthly, quarterly, semiannual, annual	Daily, weekly, monthly, quarterly, semiannual, annual
Grace Period**	31 days from premium due date	45 days from premium due date
Contestability Period***	Maximum of 2 years from date of issue or last reinstatement of policy	Maximum of 1 year from date of issue or last reinstatement of policy
Suicide Clause	Maximum of 2 years from date of issue or last reinstatement of policy	Maximum of 1 year from date of issue or last reinstatement of policy
Claims Settlement	Within 60 days after submission of complete documents	Within 10 days after submission of complete documents

* As of 3 June 2012, minimum wage rate in Metro Manila is P446 (conversion using P41.5 to $1). http://www.nwpc.dole.gov.ph

** Grace period refers to the extended period given to the insured within which they are allowed to pay their premium payments. The policy stays in effect during the grace period.

*** Contestability period refers to the period within which the validity of the insurance contract or policy may be challenged.

Source: Presentation of the Insurance Commission during the advocacy seminars conducted as part of the regional financial literacy road shows.

3. DILG MEMORANDUM CIRCULAR NO. 122 SERIES OF 2018 ON GUIDELINES FOR LOCAL GOVERNMENT UNITS ON THE STRENGTHENING OF EVACUATION SYSTEMS USING LOCAL DISASTER RISK REDUCTION AND MANAGEMENT FUND (LDRRMF)

The Essentials of DILG Memorandum Circular No. 122 Series of 2018

The DILG as the lead in disaster preparedness recognizes the need for LGUs to perceive and approach evacuation holistically. Through this issuance, it intends to encourage and guide LGUs to mobilize resources as a means of ensuring all aspects of evacuation are equally strengthened (pp1).

Table 9. Related Provisions to Ensuring ATS, RL, and RTM

PROVISIONS RELATED TO CREATING ENABLING ENVIRONMENT AND BUILDING RESILIENT CAPACITIES	
Urban Resiliency, DRRM, Climate Change Adaptation	**Related Provisions** 1. …LGUs at all levels are urged to invest, using a portion of the 70% of their respective LDRRMF for disaster prevention and mitigation, preparedness, rehabilitation and recovery in the following(pp1): 1.1 The construction of durable, safe, and properly designed evacuation facilities that meet national standards…and are responsive to the needs of its prospective users as appropriate to local contexts… 1.2 Institutional strengthening and capacity development initiatives to support all aspects of evacuations operations… 2. The policy covers LCEs, members of Sanggunian at all levels of LGUs, Local DRRM Councils, Local Development Councils, Local Finance Committees, DILG Regional Directors, and all DILG Field Officers…(pp4). 3. On the policy content, it provides LGUs with guidance on establishment of resilient evacuation centers; minimum design requirements; operations and maintenance and rehabilitation of evacuation facilities; institutional strengthening and capacity building initiatives on evacuation operations and management; use of LDRRM fund to ensure effective evacuation operations; use of local development fund for building and rehab of evacuation facilities; assistance of a higher-level LGUs; and dissemination (pp4-7).
Resilient Livelihood with Risk Transfer Mechanism Including Social Protection	**Related Provisions** The Sangguniang Panlalawigan, Sangguniang Panlungsod, Sangguniang Bayan as legislative bodies…shall adopt measures…provide relief services and assistance for victims during and in aftermath of …or calamities and their return to productive livelihood…(pp7) **Identified Gap** Need to consider convergence approach with government agencies aiming to ensure success of livelihood programs just like with DSWD SLP, DSWD Memorandum Circular 11 - 2019 on providing seed capital fund for IDPs due to disasters, and DOLE ILEEP, and following their corresponding guidelines. **Recommendation**

	Ensure success of livelihood programs in convergence with DSWD's SLP, DSWD Memorandum Circular 11 - 2019 on providing seed capital fund for IDPs due to disasters and DOLE's ILEEP though complementation of resources in the delivery of interventions.
Alternative Temporary Shelter	**Related Provisions** 1. The minimum standards for shelter, settlement…of the Humanitarian Charter and Minimum Standards in Humanitarian Response…(pp3) …provision of adequate space and protection from environmental threats to human health; availability of services, facilities, materials, and infrastructures…appropriate siting of settlements. 2. Part of the minimum design requirements include it shall allow for the installation of temporary partitions within the facility as a means of maintaining the privacy of evacuees (pp5); 3. It shall have at the minimum the following basic features: …an average space allocation of 1.33square meters per person for shelter and accommodation, based on DSWD standard of 40 square meters per 6 families considering the average family size of 5 person /family (pp5). 4. On capacity building, the policy encourages all LGUs to: …Establishment of integrated information systems constituted by hazard maps..; maps with identified hazard-prone maps with hazard-specific evacuation routes…;vulnerable population groups; residents-at-risk and potential evacuees; maps of lifelines and basic facilities; inventory of food supplies, rescue and evacuation equipment, medical supplies, and other non-food items…(pp6). 5. Purchase of food (minimum of 300 packs for at least 3 days per NDPP Minimum Standards, Vol 2) and non-food items (e.g. clothing, bedding, etc.) intended for evacuees (pp6). **Identified Gap** 1. None of the policy provisions spell out purchase or provision or development of models of alternative temporary shelter or "tents" following standards, it could be assumed that it is part of non-food items. 2. None of the policy provisions spell out increasing the capacity of providing timely and responsive alternative temporary shelters **Recommendations** 1. Include in the policy a clear provision on purchase, or provision, or development of models of alternative temporary shelter or "tents" following standards, which could be included in the non-food items. If LGUs are willing co-develop models of ATS, it has to strengthen collaboration among players in the Science, Technology and Innovation (STI) ecosystem including government, universities, and private sector-industries to study and design ATS responsive models 2. Promote capacity building in the DRRM ecosystem to provide timely, responsive ATS following standards.

4. DSWD ADMINISTRATIVE ORDER (AO) NO. 13 SERIES OF 2015 ON DISASTER RESPONSE OPERATION GUIDELINES

The Essentials of AO No. 3 Series of 2015

This policy recognizes the primary role of DSWD in leading disaster response. Due to the passage of RA 10121, DSWD's task is no longer limited to the delivery of disaster response programs and services of the agency, its scope now covers the task of coordinating, and synchronizing the delivery of national disaster response programs and services (pp1). In effect, DSWD required an all-agency response strategy especially during massive disasters. Moreover, DSWD sits as Vice Chairperson for DSWD in NDDRMC Response Cluster. In the event of large-scale disaster involving the international aid community, the UN IASC Humanitarian Clusters are activated with the DSWD being the country lead for protection, camp-coordination management, and food and nonfood assistance (pp3).

The Regional DRRMCs have similar as the NDRMMC with the Field Offices (FOs) of DSWD serving as Vice-Chair. The FOs take the lead in response when disasters occur in two or more provinces in its region.

The policy has three parts: challenges along disaster response, disaster response policy framework and recommendations to address the gaps; DSWD disaster response guidelines; and "pull-out" documents as easy references.

Table 10. DSWD AO No. 13 Series of 2015 Related Provisions to Related Provisions to Ensuring ATS

PROVISIONS RELATED TO CREATING ENABLING ENVIRONMENT AND BUILDING RESILIENT CAPACITIES	
DRRM	**Related Provisions** 1. As the head of response pillar, the DSWD ensures that the response of government as a whole is well coordinated, follows national standards, and is clearly communicates to the public (pp3). 2. The calamity fund is used for DRR, mitigation and preparedness which may likewise be used for relief, recovery, and reconstruction for calamities that happened during or 2 years prior to the current budget year…30% of the fund is allocated as Quick Response Fund, access to this fund is based on the recommendation of the Council and subject to approval by the President (pp3). 3. LGUs primary responsibility for local disaster response. DSWD provides technical assistance, resource generation, and augmentation(pp3). 4. All FOs shall undertake continuous Family and Community-Based Disaster Response Preparedness FCBDP) trainings…hazard/risk and vulnerability mapping and man-made disasters, identification of and profiling to determine the capacity and amenities of evacuation centers… (pp18). 5. All FOs shall maintain a database containing location and profile of evacuation centers, validated and updated with the LGU every quarter (pp18).
Alternative Temporary Shelter	**Related Provisions** 1. Non-food items are humanitarian relief items other than food and water necessary for the survival and protection of the victims of disasters, such as **family tents**, clothes, blankets, mats, mosquito nets, tarpaulins,

	emergency lighting, water container, kitchen wares, hygiene kits, etc. provided to disaster-affected families (pp11). 2. DSWD, is in-charge of …ensuring availability of safe, secure, and accessible evacuation centers…; protection for IDPs inside and outside the evacuation centers are provided with humanitarian needs based on accepted standard. The Department shall preposition humanitarian goods and resources before occurrence of disasters (pp13) 3. The Usec for Operations and Program Group (OPG) shall assist the Secretary by orchestrating and actual management of the implementation and delivery of disaster response activities…The Asec for OPG-Protective Programs shall assist the Usec for OPG and shall act as the Action Officer of the Department for the Internal disaster operations and activation of NDRRMC Response Operations Center. The OPG shall also be responsible to (pp15): …Ensure that food and non-food items such as those needed at the evacuation venters or temporary shelter sites like family tents… are readily available once needed…; provide technical assistance to FOs and LGUs affected by disasters on managing evacuation or displacement sites/temporary shelters…; allocation of food and non-food items to target beneficiaries; ensure procurement of food and non-food items for disaster response… 4. All FOs shall have a stockpile of non-food items to include 1000 family kits… (pp17). 5. The DSWD CO shall release to the FO the initial of…PhP5M for non-food items (pp18). 6. *Response Level 1*- … affected families are likely to stay in ECs for more than a week…(pp21) *Response Level 2* – severely affected families need prolonged assistance from 3 -4 weeks in and outside ECs, including temporary shelters…(pp21). *Response Level 3* – severely affected families require prolonged five weeks or more accommodation in ECs and temporary shelters (pp22). *Response Level 4* – requirements for humanitarian response is beyond the normal structure and mechanism of DSWD (pp22).
PROVISIONS RELATED TO IMPROVING SOCIAL RELATIONS	
DRRM	**Related Provisions** 1. Defines social capital as a network of connections among members of a community that produce good will, shared values and understandings, motivating and enabling individuals and groups to trust and help one another, work together, and care for each other (pp8). 2. The Usec for Institutional Development Group (IDG) shall provide manpower support by pooling staff and volunteers…(pp16)
Resilient Livelihood with Risk Transfer Mechanism	**Related Provisions** 1. Communities with high social capital have better developed schemes for mutual aid and informal safety nets, including micro-insurance, and micro-lending… In the Philippines, social capital is … *"bayanihan"* tradition (pp8). 2. For efficiency, a wider risk pooling is necessary(pp8).

5. DSWD ADMINISTRATIVE ORDER (AO) NO. 9 SERIES OF 2014 ON GUIDELINES IN THE IMPLEMENTATION OF TEMPORARY SHELTER ASSISTANCE AND PRIORITIZATION OF VICTIMS OF DISASTER/INTERNALLY DISPLACED PERSONS

The Essentials of DSWD AO No. 9 Series of 2014

The guidelines are anchored on the United Nations Guiding Principles for Internal Displacement, taking in account international human rights and humanitarian law, with the aim of ensuring that families are safe and not exposed to further harm or danger. It is also consistent with existing laws, policies and other related issuances.

The guidelines provide criteria in the identification, selection and prioritization of families who will be entitled to occupy the bunk houses or temporary shelters that the government will construct for the victims of various types of disasters. It also presents the roles and responsibilities of the agencies engaged in the implementation of shelter assistance projects.

To equipped us on how to appropriately use technical terms, DSWD clarified the nuances of temporary shelter, transition shelter, and family tent:

Temporary shelter or bunk houses are structures temporarily constructed by the government intended for families affected by a disaster while awaiting transfer to permanent shelters.
Transition shelter are temporarily established for families facing displacement for more than a month and normally waiting for permanent relocation.
Family tents (as defined in DSWD AO No. 3 Series of 2015) are part of the non-food items (NFIs) as humanitarian relief other than food and water necessary for survival and protection of the victims of disasters.

Table 11. DSWD AO No. 9 Series of 2014 Related Provisions to Ensuring ATS

PROVISIONS RELATED TO CREATING ENABLING ENVIRONMENT AND BUILDING RESILIENT CAPACITIES	
Urban Resiliency, DRRM	**Related Provisions** 1. The guidelines on temporary shelter is anchored on the following: 1.1 Philippine DRRM Law which advocated and promotes community - based disaster management (pp2). 1.2 Magna Carta of Women which recognizes women's rights to protection and security in times of disaster, calamities and other crisis situations (pp2). 1.3 Expanded Senior Citizens Act which ensures the safety and assistance for the senior citizens in order to cushion the effects of economic shocks, disaster and calamities (pp2)
Alternative Temporary Shelter	1. The construction of bunk houses or temporary shelters is one of the major services being provided by the government to disaster affected families while waiting for the construction of their permanent homes. (pp3) 2. The guidelines provide criteria in identification, selection and prioritization of families who will be entitled to occupy the bunk houses or temporary shelters that the government will construct for the victims of all types of disasters. (pp3)

	3. Priority beneficiaries of the bunk houses are the vulnerable families residing in disaster prone areas…declared by the …government as "unsafe zone" , thus they are no longer allowed to return to their ara of habitation...(Section VI, Paragraph 1) 4. The following are the eligibility requirements to qualify as beneficiaries (Section VI, paragraph 2): 4.1 Family income is below the food threshold of the region; 4.2 Family is not a recipient of any other hosuing assistance; 4.3 Head of the family died or incapacitated as a result of the disaster; 4.4 Head of family is seriously ill, incapacitated to work or differently abled and cannot provide minimum requirement for food and shelter; 4.5 Head of the family is an older person not receiving social pension; 4.6 Head of the family is a female who is pregnant, has just given birth or lactating or who has children below 2 years old; 4.7 Family with more that 5 members where majority are below 18 years old; 4.8 Head of the family is a solo parent; 4.9 Orphan child whose parent/s died during disaster; 4.10 Certification from Barangay on residency, occurrence of disaster, and extent of damage or effect of disaster. 5. The selection procedure for individuals and families for temporary shelter is as follows (Section VI, paragraph 3): 5.1 LGU to administer the Disaster Assistance Family Access Card (DAFAC) 5.2 DSWD Field Office to conduct an area visit to validate the list of families and verify the names; 5.3 DSWD and LGU concerned to orient the beneficiaries on the procedure, selection, awarding and maintenance of the shelter units; 4. Beneficiaries to sign a contract with DSWD and LGU concerned with undertaking that the beneficiaries will not sell, rent out or mortgage the shelter unit 6. The vulnerable families are no longer allowed to return to their original area of habitation. They shall be the priority for shelter assistance in resettlement or relocation sites. (p3) **Identified Gap** No specific guidelines in building resilient capacities of the affected families except for the government's policy prohibiting them to return to the original habitation which are declared as unsafe zone. **Recommendation** Capacity building and other support programs may also be available to affected individuals and families in order to increase their coping capacities as victims of disasters and calamities and be able to resume their normal way of life and to ensure safety in their temporary homes.
PROVISIONS RELATED TO IMPROVING SOCIAL RELATIONS	
Alternative Temporary Shelter	**Related Provisions** 1. On institutional arrangements (Section VII), the DSWD FO is in-charge of beneficiary validation, coordination with LGU, contract facilitation,

	monitoring status of beneficiaries, and submission of periodic progress to DSWD DRRROO; 2. The DRRROO monitors the status of the project, ensure service implementation, and provision of technical assistance. 3. LGUs undertakes registration of beneficiaries using Disaster Assistance Family Access Cards, facilitates coming up of final list of beneficiaries, conducts social preparation activities, undertake contracts with beneficiaries, undertakes transfer of shelter to beneficiaries, ensures appropriate occupancy, ensures safety and protection of vulnerable sectors, ensure compliance to contract, organizes family beneficiaries into association, and submits periodic progress reports to DSWD FO. **Identified Gap** The coordination work between DSWD, DILG and LGU is not time bound. It would take a long time before the shelter assistance be provided to the affected individuals and families. **Recommendation** To enhance efficiency and effectiveness, creation of a composite team will fast tract the validation, selection and award of temporary shelter assistance for disaster victims. The conduct of field visit should be made not later than 30 days from the occurrence of disaster.
Resilient Livelihood with Risk Transfer Mechanism	**Related Provision** LGUs … organizes family beneficiaries into association (Section VII). **Identified Gap** A mandate to LGUs to organize family beneficiaries as association is already there but an intention to organize these beneficiaries as economically resilient association was not considered. **Recommendation** Include in the roles of LGUs to facilitate livelihood development or rehabilitation with risk transfer mechanism and social protection arrangements following DSWD MC No. 18 Series of 2018 on provision of seed capital fund to the IDPs displaced by disasters and DILG Memorandum Circular No. 2015-77 and DILG Memorandum Circular No. 73 Series of 2012 on mainstreaming CCA and DRR to development planning utilizing LDRRMF.

6. DOLE DEPARTMENT ORDER NO. 173 SERIES OF 2017 ON REVISED GUIDELINES IN THE IMPLEMENTATION OF DOLE INTEGRATED LIVELIHOOD AND EMERGENCY EMPLOYMENT PROGRAM (DILEEP)

The Essentials of DOLE Department Order No. 173 Series of 2017

The policy orders to integrate all DOLE existing livelihood programs to KABUHAYAN Program. The policy seeks to contribute to poverty reduction and reduce vulnerability risks of the poor, vulnerable, and marginalized workers either through transitional emergency employment or *Tulong Panghanapbuhay sa ating Disadvantaged/Displaced Workers (TUPAD)* Program; and promotion of integrated livelihood through entrepreneurship otherwise known as *KABUHAYAN. KABUHAYAN* as a grant assistance can either be an individual or group livelihood to start, enhance and re-

establishment. The abovementioned objective is expected to be achieved by ensuring access of target beneficiaries; prescribing clear standards, transparent procedures; ensuring accountabilities; and adopting convergent approach in the delivery of programs and services of government and private organizations.

It pursues the principles of convergence of services to ensure success of interventions; technology-driven, resource-based and sustainable livelihood; full decentralization of approving/signing authority.

The Regional Directors shall be fully responsible and accountable for all project fund releases, in accordance with existing budgeting, acounitng , and auditing rules and regulations.

It follows a project management cycle with stages of pre-implementation phase where beneficiaries shall be provided with trainings; implementation phase in which beneficiaries shall be provided with working capital; and post-implementation phase in which beneficiaries shall be provided with continuing technical and business advisory services with periodic monitoring of the project and reporting of project status.

Table 12. Related Provisions to MOVE UP's *Resilient Livelihood with Risk Transfer Mechanism*, Identified Gaps, and Recommendations

Related Provisions
1. Under the Accredited Co-Partner (ACP) Mode, the following will qualify as partner in the implementation…provided they are registered with any government registering body and accredited with DOLE: peoples/workers' organizations; …cooperatives; (Section 6, pp6).
2. Training may be provided by partner agencies… or as equity of the ACP or beneficiary. If particular training cannot be provided by partner agencies or the ACP, it may be financed by the program funds provided it is included in the project proposal… The total training cost shall not exceed PhP5000 per beneficiary and professional fees shall be in accordance with DBM Circular rates… The following trainings must be provided to the beneficiaries depending on the needs of requirements… (Section 7, pp7).
3. …working capital in the form of raw materials…and other support services necessary…shall be extended social security through enrolment in group personal accident insurance of GSIS to be included in the project cost ot counterpart of the ACP (pp8).
4. The following support services can be funded: common service facility (CSF) which may be in the form of equipment, tools and other items that can be commonly used or shared by members…; and training-cum-production wherein the beneficiaries will be provided skills training with a tangible output/product…(pp10).
5. Categories of livelihood projects are (pp10): ***Group Projects.*** micro-livelihood – organization composed of 15-25 members can avail a maximum assistance of PhP250,000; small livelihood – composed of 26-50 members that can avail a maximum assistance of PhP500,000; medium livelihood – composed of more than 50 members that can avail a maximum assistance of PhP1M. An organization managing a project should have a project management team and profit-sharing scheme to be stipulated in the business plan and in MOA. ***Individual Projects.*** Beneficiaries can avail of the Starter Kit or Negosyo sa Kariton (nego-Kart), up to a maximum assistance of PhP20,000…(pp11).
6. Eligible beneficiaries are enumerated in page 11 which include workers displaced or to be displaced as a result of natural disasters.
7. Eligible projects include priorities of the Regional Development Council, Regional Convergence Committee and Regional Development Plans of LGUs; key employment generators; and DTI priority products (pp12).

8. The following projects are not allowed: micro-lending; construction works; motor vehicles… (pp13).
9. Section 17, 18, 19 details the process and requirements of accreditation (pp17-20).
10. Approved proposals shall be funded through regional allocation for capacity building…; DOLE-AMP; other source of funding as may be provided by GAA; and funding from international Organizations (pp21). …a mandatory 1% of regional DILEEP funds shall be allocated to PWDS and Senior Citizens (pp22).

Identified Gaps

1. There is no provision to build the capacity of individuals or livelihood associations to identify and evaluate existing hazards, vulnerabilities and exposure of livelihoods;
2. There is no provision to establish and strengthen capacities of the individuals or livelihood associations to anticipate, cope, and recover from negative impact of disasters like livelihood continuity planning or Business Continuity Plan (BCP);
3. There is no provision to evaluate current developments on different types of affordable disaster risk transfer mechanisms (RTM) for livelihood and livelihood assets, with an intention to include RTM as part of livelihood assistance to manage disaster risks of livelihoods.
4. There is no mention of savings mobilization that shall be used for shall be used for capital build-up, operational fund, and emergency fund.
5. There is no mention of the necessity to adopting value chain approach to livelihood development.
6. There is no mention of the necessity to maximize the participation and contribution of livelihoods in global value chains through forging strong partnership and strategic alliances with the private sector, academe and other government agencies.
7. No mention of inclusion of livelihood association in the DRRM ecosystem

Recommendations

1. Provide policy to identify and evaluate existing hazards, vulnerabilities and exposure of livelihoods; and ensure DRRM and CCA risk assessments as part of the requirements and are implemented.
2. Provide policy to establish and strengthen the capacities of vulnerable beneficiaries or groups to anticipate, cope, and recover from the negative impacts of disasters like enterprise continuity planning;
3. Evaluate current developments in different types of affordable disaster risk insurance and risk financing such as livelihood insurance or livelihood asset insurance, fire insurance, natural catastrophe insurance, and insurance for enterprise employees with streamlined procedures, rapid payment, a repayment exemption period, and incremental increases in repayment amounts; and facilitate their inclusion in approved livelihood proposals for funding.
4. Develop and disseminate targeted tools and training like promoting, using, or developing Business Continuity Manuals (BCM) and training programs that are based on a full risk assessment that includes natural and industrial hazards resilient BCM.
5. Emphasize the need for savings mobilization that shall be used for capital build-up, operational fund, and emergency fund. The livelihood association shall set-up a system for the management of savings including savings mobilization; provision for re-loans; and incentives and penalties for borrowers.
6. Adopting value chain approach to micro-enterprise development.
7. Maximizing the participation and contribution of livelihoods in global value chains through linking livelihood associations with large corporations on BCM. Facilitate engagement by large Philippine enterprises and foreign companies to support resilient livelihood BCM for livelihood in their supply chain.
8. Institutionalizing representation of livelihood associations in the DRRM system

7. SUMMARY

a. Apart from the above-reviewed international conventions, national policies and plans, it is imperative to also consider other legal bases in pursuing sustainable and resilient livelihood in the Philippines and in an urban context. Such bases include Article XII Section 1 of the 1987 Philippine Constitution, Republic Act (RA) 5416 or the Social Welfare Act of 1968, Section 1 of (RA) 7160 or the Local Government Code, RA 11032 or the Ease of Doing Business and Efficient Government Service Delivery Act of 2018, RA 11291 or the Act of Providing for a Magana Carta of the Poor, and RA 11310 or the Act Institutionalizing the *Pantawid Pamilyang Pilipino* Program (4Ps).

b. It is also imperative to consider other legal bases in pursuing Alternative Temporary Shelter in the Philippines and in an urban context. Such legal bases include Republic Act (RA) 10121 or the Philippines DRRM Law, RA 7160 or Local Government Code of 1991, Presidential Decree 1067 or the Water Code of the Philippines, Magna Carta for Women, Expanded Senior Citizen Act of 2010, RA 7277 or the Act Providing for the Rehabilitation, Self-Development, Self-Reliance of Disabled Persons and their Integration into the Mainstream of Society and Other Purposes, Batas Pambansa 344 an Act to Enhance the Mobility of Disabled Persons Requiring Certain Building Institutions, Establishments and other Utilities to Install Facilities and Other Devices, and other DSWD Issuances.

c. In a nutshell, the above-reviewed international conventions, national policies and plans recognize the need for cohesion of disciplines involving inclusive growth, sustainable development, social protection, resilience, DRR, and CCA in implementing livelihood interventions and ATS for urban vulnerable communities. Most of these policies or plans outlines the necessity of risk financing, risk transfer mechanisms for livelihoods and ATS for urban vulnerable communities. Figure 4 illustrates the framework in co-creating sustainable and resilient livelihood with both DSWD-SLP and DILEEP. Figure 5 illustrates the framework in co-creating ATS arrangements with DREAMB or with LGUs.

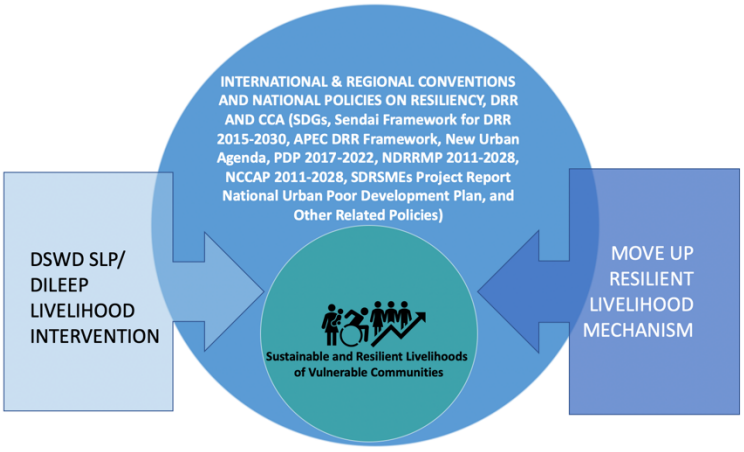

Figure 4. Framework in Co-Creating Sustainable and Resilient Livelihood with DSWD-SLP and DILEEP

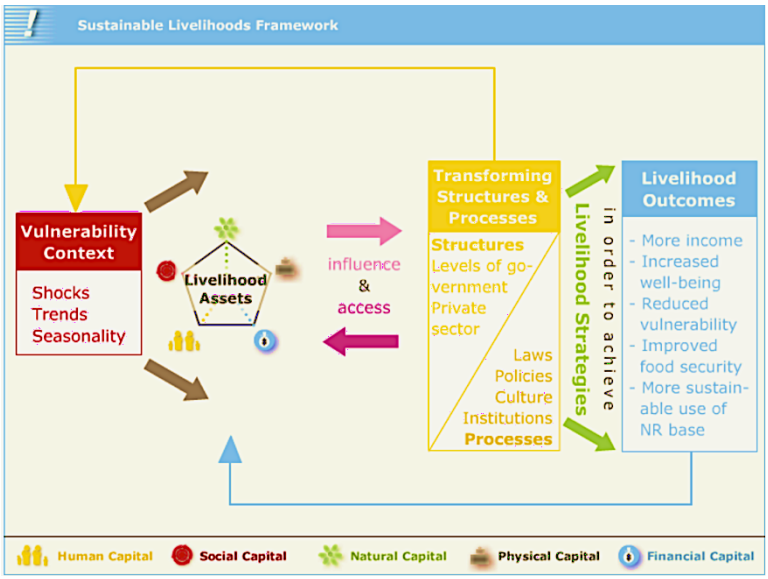

Figure 5. Framework in Co-Creating ATS with DSWD-DREAMB and LGUs

CHAPTER III

FOCUSING ON PROMOTING AND STRENGHTENING SUSTAINABLE AND RESILIENT LIVELIHOOD

Along with its evolution from SEA-K Program and with its intention to entrench best practices from international experiences, the DSWD-Sustainable Livelihood Program (SLP), adopted the British Department for International Development's (DFID) Sustainable Livelihood Framework (SLF) which provides a description of a sustainable livelihood as stated below:

> "A livelihood is considered sustainable if it is independent from external support, if it is able to maintain the long-term productivity of natural resources, if it does not undermine the livelihood options of others, and if it is resilient and can recover from shocks and can maintain or enhance its capabilities and assets both now and in the future".

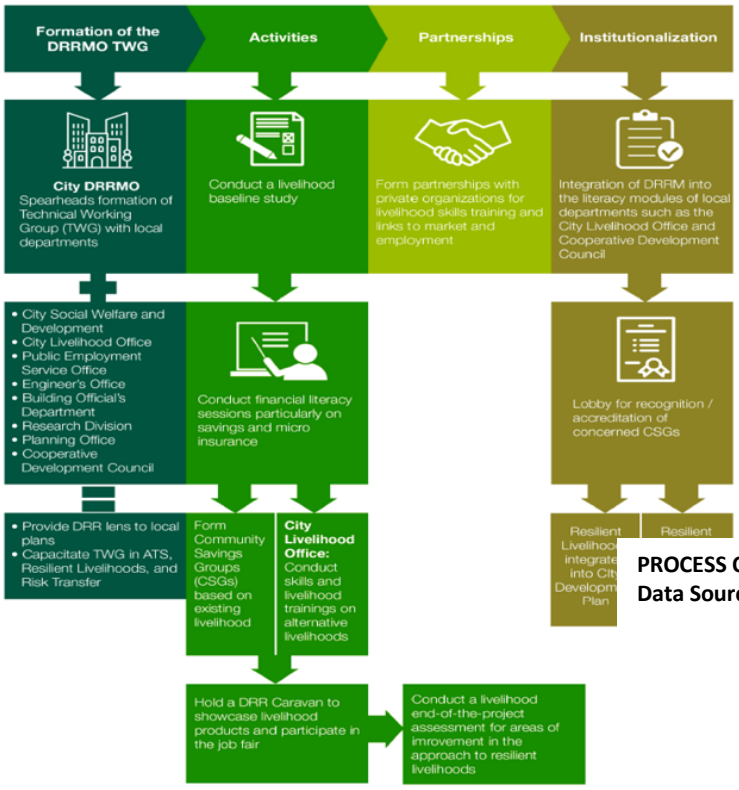

Data Source: DFID (2000)

Meanwhile, the Moving Urban Poor Communities Towards Resilience Project or the MOVE UP[35] with its five (5) years of co-implementing livelihood interventions in urban vulnerable communities came up with a description of resilient livelihood which states that:

> "Adaptive practices such as identifying alternative livelihood options within existing value chains and accumulating savings that can be used in times of disaster. This also includes financial literacy activities intended to change the mindset and attitude of the urban poor to one in which social and economic protection are viewed as their obligation. With proper social preparation and readiness, the action introduces effective and appropriate models of savings, livelihood improvement options and risk transfer".

[35] A disaster risk reduction and management (DRRM) project being implemented by a Consortium of non-government organizations (NGOs), namely: Action Against Hunger (AAH), Assistance and Cooperation for Community Resilience and Development (ACCORD), CARE Philippines, and Plan International. The Project aims to strengthen the urban resilience of the most vulnerable population through an improved alternative temporary shelter system, increased livelihood resilience, and institutionalized mechanisms and models of urban resilience. The Project is funded by the European Commission on Humanitarian Aid (ECHO) under its Humanitarian Action Plan (HIP) for Southeast Asia and the Pacific Program.

PROCESS OF PROMOTING RESILIENT LIVELIHOOD
Data Source: MOVE UP 1 (2017)

These two interrelated descriptions from separate initiatives became the take-off point in reviewing the implementing guidelines of DSWD-SLP[36] towards enhancing it as a livelihood intervention which deliberately increases urban resilience capacity and mechanisms for the vulnerable communities. This is the core content of this report.

A. OUTLINING THE CRITERIA FOR SUSTAINABLE AND RESILIENT LIVELIHOOD

1. Emphasizing the UN's definition of sustainable development linking the three dimensions of sustainable development: economic development (profit), social inclusion (people), and environmental sustainability (planet). These three dimensions could be flexibly applied in livelihood interventions to become more holistic in its sustainability approach.

2. The DSWD-SLP adopted the DFID's SLA as analytical framework to handle the complexity of local livelihoods. It is clear that SLA is not a new paradigm, it is a collection of best practices, and it gives due recognition to other development approaches. The hallmark of such framework is to bridge the gap between macro and micro by ensuring that the higher level policy is informed by the insights from the lower level and by the priorities of the poor and vice versa. Thus, it recognizes the need for aligning livelihood implementing guidelines to macro policies such as the above-reviewed policies to international conventions, national policies and plans tackling resilience, DRR and CCA.

3. To crystallize the interrelatedness and interdependency of two concepts- "sustainable" and "resilient" – it is essential that stakeholders examine the elements of both concepts with the intention of operationalizing it in a livelihood of a vulnerable individual or groups. Table 8 outlines the criteria of a sustainable and resilient livelihood.

[36] A social protection program focusing on active development of the labor market.

Table 12. Criteria of a Sustainable and Resilient Livelihood

	Criteria
Sustainable Livelihood	**Economic development** 1. Economically viable. 2. Mobilizes savings, accesses capital markets, loaning funds, and re-loaning funds. 3. Increases wage and self-employment in the short run and improves socio-economic wellbeing in the long run through acquisition of productive assets and income. 4. Has access to financial services, including affordable credit. 5. Guided by community-driven enterprise development approach anchored on being resource-based and market driven.
	Social inclusion 1. Organizationally viable 2. Encourages community members to organize formal associations that are responsible for projects' implementation with the long-term goal of making these associations self-sufficient 3. Goes through a process of project development with feasibility assessments and project management practices and principles for capacity building purposes. 4. Reduces inequality 5. Protects labor rights and promote safe and secure working environments for all workers. 6. Promotes partnership to achieve goals.
	Environmental sustainability Ensure sustainable consumption and production patterns
Resilient Livelihood	**Creating enabling environment** 1. Implements adaptive alternative livelihood options within the value chains. 1. Has savings management and has access to credit. 2. Considers social protection for entrepreneurs and employees. 3. Considers provision of wellness, mental health and psychosocial support options for the entrepreneurs and employees. 4. Promotes well-being, mental health and psychosocial resilience.
	Building resilient capacities 1. Capability on personal resilience – Self Control Over Oneself (self-awareness, determination, vision, and self-confidence); Self-Control Over Responses to Other People (interaction, relationships); Self Control Over Responses to Events (organization, problem-solving). 2. Evaluates existing hazards, vulnerabilities and exposure of livelihoods. 3. Identifies critical assets and processes of the livelihood; 4. Assesses livelihood risk impact levels; 5. Having resilience team to prepare livelihood resilience plan or livelihood continuity plan. 6. Ability to resume livelihood operations in relation to suppliers and vendors continuity. 7. Identifying livelihood areas that would need digitization and would need IT assets. 8. Considers risk transfer mechanisms or have considered different types of affordable and tailored risk financing or microinsurance such as livelihood insurance or livelihood asset insurance, fire insurance, natural catastrophe insurance, and insurance for enterprise employees with streamlined procedures, rapid payment, a repayment exemption period, and incremental increases in repayment amount.
	Improving social relations 1. Adopts self-governing association development pattern for internal or external economies of scale. 2. Explores being part of the DRRM local bodies (e.g, DRRMC, BDRRMC, etc.)

SUSTAINABLE LIVELIHOOD PROGRAM

B. PROVISIONS IN THE IMPLEMENTING GUIDELINES OF SLP REFLECTING CRITERIA OF SUSTAINABILITY AND RESILIENCY

The Essentials of DSWD Memorandum Circular (MC) No. 22 Series of 2019

The policy clearly defines the program known being the Sustainable Livelihood Program (SLP) as capability-building program for the poor, vulnerable, and marginalized households and communities to help improve socio-economic conditions through accessing and acquiring necessary assets to engage and maintain livelihoods. It seeks to uphold inclusivity among vulnerable population. It also aims to increase the level of participation among program participants and harness sense of ownership of their development. It operates in all regions and provinces, treating all municipalities, cities, and barangays as potential areas for implementation its various interventions. The policy seeks to streamline and simplify the implementation process of SLP revising previous guidelines on SLP including MC No. 12 Series of 2018, MC No. 14 Series of 2018, and MC No. 18 Series of 2018.

Table 13. Provisions Reflecting Criteria of Sustainable and Resilient Livelihood

2.1 PROVISIONS RELATED TO CREATING ENABLING ENVIRONMENT AND BUILDING RESILIENT CAPACITIES	
1.1.1	It enumerates eligibility requirements (pp6) for regular clients having an option to choose a modality of assistance which is either through Micro-enterprise Development Track or through Employment Facilitation Track (pp7).
1.1.2	Implements program with following stages – ***pre-implementation stage*** which involves coordination with various stakeholders to obtain relevant information to be able to identify priority areas of implementation (pp8); ***social preparation stage*** which build capabilities of program participants and SLPA formation (pp9); ***resource mobilization stage*** which involves feasibility assessments, release of grants, and finalizing the project proposal (pp14); ***project implementation stage*** which basically covers project operations (pp25); and ***program participant mainstreaming stage*** focusing on th achievement of program's intermediate outcome which is to ensure access to external resources… (pp26).
1.1.3	As long as requirement are completed the program provides ***Seed Capital Fund*** (maximum of P15K per participant), ***Skills Training Fund*** (maximum of P15K per participant), and ***Cash for Building Livelihood Assets Fund*** (100% of present regional minimum wage for a maximum of 11 days) (pp7).
1.1.4	…shall obtain information on regional government investments…shall identify institutional market resources and opportunities…shall prepare the RLAMM and PLAMM for public and private sector opportunities…shall prepare a City/Municipal LAMM (pp8).
1.1.5	Capability-building activities…(pp10).
1.1.6	The allowable types of micro-enterprises include association enterprise…and individual microenterprise… An SLPA may have a combination of both…(pp12).
1.1.7	The assessor should review the feasibility of the of the proposed projects using the project assessment tool…must review and assess the submitted MAF based on the following…(pp15).
1.1.8	Savings management. …the SLPA has the responsibility to recover the grants…in the form of savings among its members (pp20). The generated savings shall be used for capital build-up, operational fund, and emergency fund…SLPA shall set up a system... which details savings management, provision for re-loans, and incentives and penalties for borrowers (pp21).

SUSTAINABLE LIVELIHOOD PROGRAM

1.1.9	Program participant mainstreaming stage. SLPA/program participants are continuously capacitated towards self-governance…(pp26).
1.1.10	Community Mobilization Fund (CMF) shall be used to finance meals and transportation allowance of program participants for capability building activities (pp27).
2.2. PROVISIONS RELATED TO IMPROVING SOCIAL RELATIONS	
2.2.1	Prioritization of project barangays (pp8).
2.2.2	Coordination with Municipality/City and Barangay Stakeholders. …pre-requisite signed Unified MOA…(pp9).
2.2.3	… all participants have duly accomplished SLP Data Privacy Consent and Confidentiality Agreement…(pp9).
2.2.4	SLPA Formation for MD Track participants… including leadership training, organization building…(pp11).
2.2.5	After 3 months of operations, the SLPA shall assemble…to discuss matters concerning the association…membership and/or registration to concerned government agencies…(pp25).

C. BEST PRACTICES/PRINCIPLES AND POLICIES ON SLP IMPLEMENTATION

1. With SLP as a Labor Market Intervention (Social Protection Project of the Government) of the DSWD, it has done a good job with emphasizing on Capacity Building for the Poor, Vulnerable and Marginalized as stated in Section IV, Item 1.

2. Upholding inclusivity as stated in Section IV, Item 1.

3. Actual and informed need is the basis of implementation and other modalities not just livelihood. This is manifested in Section IV, Item 2.1.2.
4. Project Management Cycle was simplified to make it more palatable to vulnerable communities. This is manifested in Section IV, Item 2.1.2.

5. Installing social and technical safeguards – which has been favorably assessed by World Bank, ADB, etc. This is manifested in Section IV, Item 2.1.7

6. Sense of ownership is being developed which could be attributed in its resource-based and market driven approach, opposite to the concept of supply-driven.

7. Building Livelihood Associations towards self-governing bodies which is not seen in DTI, DOLE programs) as indicated in Section IV, Items 2.1.9 and 2.2.4

8. Data Privacy and Confidentiality are considered as indicated in Section IV, Item 2.2.3.

9. Protocols on engaging stakeholders thru proper coordination with barangay, municipality etc. as indicated in Section IV, Item 2.2.2.

10. Emphasis on locally driven livelihood development.
11. Prioritizing needy barangays which may have been a take-off from the KALAHI-CIDSS program.

12. Savings that can be converted to operational or emergency fund, originated from SEAK that lead to self -governing decision making as indicated in Section IV, Item 2.1.8.

13. Aligning with Local Development Priorities thru RLAMM – livelihood assets and market map wherein there is resource mapping as indicated in Section IV, Item 2.1.4.

14. Livelihood Intervention will not be damaging to Natural Resources as indicated in Section IV, Item 2.1.6 and 2.1.7.

D. IDENTIFIED AREAS FOR IMPROVEMENTS AND RECOMMENDATIONS TO ENHANCE DSWD-SLP IMPLEMENTATION

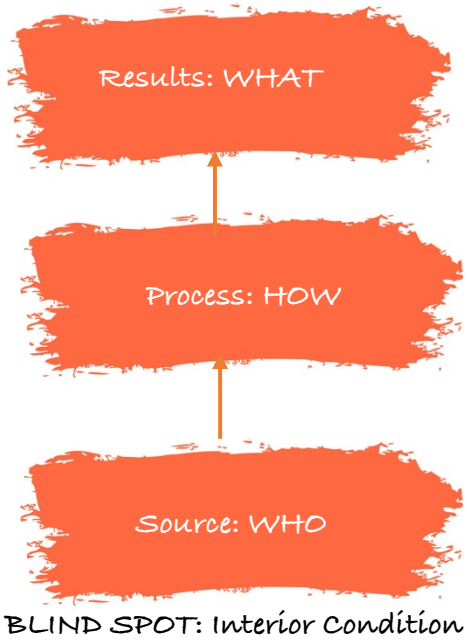

1. On Strategic Policy

1.1 The necessity of using the lens of disaster resiliency in the MC is of utmost concern. Guidelines of the MC was written with great consideration to simplify the document but possibly at the expense of omitting some parts.

1.2 The DSWD-SLP Field Operations Manual 2015 needs to consider guidelines/component or lens of resiliency. The existing tools in the said manual like *Mungkahing Proyekto* lack simple resilience tools.

1.3 Giving emphasis on personal resilience as a necessary part of the whole resilient livelihood intervention is a basic requirement for a livelihood to become sustainable and resilient.

1.4 O. Scharmer in his Theory U clarified that in a complex reality surrounding an intervention, there is a blind spot. The blind spot concerns the inner place - the source- from which we operate when we act, communicate, perceive, or think. We can see ***what*** we do (results). We can see ***how*** we do it (process), but we usually are not aware of the ***who***.

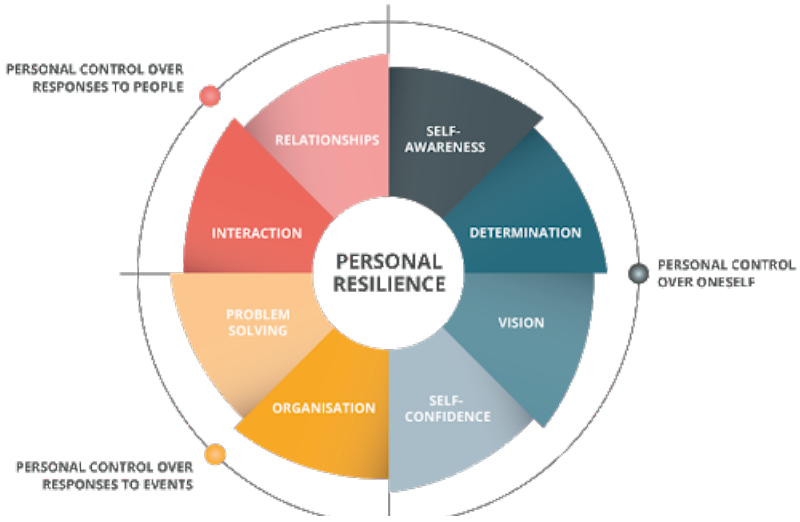

1.4.1 This illustration of blind spot is crystallized when one who is responsible to revive a livelihood, and he or she is not able to carry out the responsibility after a disaster had hit and crushed critical asset of livelihood. Most of the reasons, according to the studies of Prof. Mowbray pointed to inability of managing personal resilience. Personal resilience is the ability to cope with extreme stress-provoking events without experiencing any personal stress signs or symptoms. Mowbray's Resilience Development Framework (as shown below) has been designed to deliver a process that addresses three elements of control:

- Personal Control over Oneself
- Personal Control over Responses to Events
- Personal Control over Responses to Other People

1.4.2 In categorizing specific skills to strengthen personal resilience vis-à-vis with the three elements of control, Mowbray formulated the following:

PERSONAL CONTROL OVER ONESELF

Self-awareness - This element focuses on understanding oneself, the experiences we have had, the skills we have acquired, and how we think about ourselves. The better we understand ourselves the more we understand others; they greater our confidence, and the stronger our attitudes become in the most promising situations.

Mowbray's Framework in Strengthening Personal Resilience
Data Source: Management Advisory Service (2018)

Determination- This is about finding out personal values, as they drive us, and influence our attitudes to challenges.

Vision- People who know what they want often get it. This is about finding out what you want from life. It strengthens our resolve and tends to dilute the impact of challenges in the short term as the person strives for something more personally important in the long term.

Self-confidence - This is about being able to control anxiety. Once the skills are acquired, self-confidence is increased.

PERSONAL CONTROL OVER RESPONSES TO EVENTS

Organization - This element provides skills to cope with chaos.

Problem solving - This provides exercises in different types of problem. Those able to tackle problems seek to find ways of resolving challenges. Good problem solvers have robust attitudes towards challenges.

PERSONAL CONTROL OVER RESPONSES TO OTHER PEOPLE

Interaction - This element provides skills in persuasion. Those who know how to handle people in different circumstances have more robust attitudes towards people who show questionable behavior.

Relationships - This element helps to identify relationships that are important and strong. It, also, deals with establishing mutual expectations, a common challenge in a livelihood.

2. On Social Inclusion

2.1 The program needs to include a simplified organizational development and management (ODM) approach, and institutional development options for livelihood interventions.

ODM Process
Data Source: PHCPI (2019)

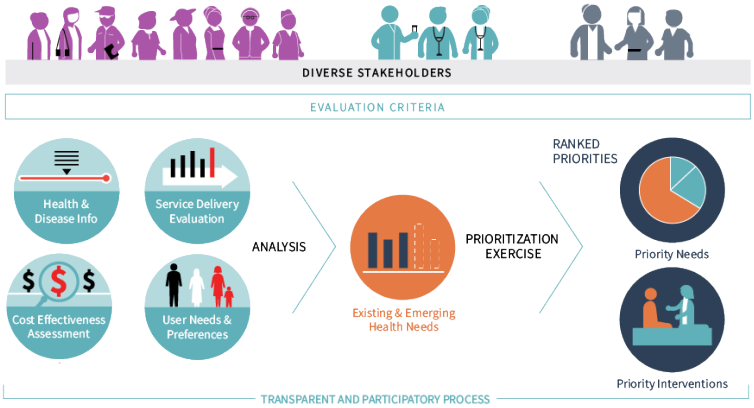

2.3 Integrating a day care system, an interest primarily of women (as participants in economic development) which can also be a home-based livelihood option. Also, another means of diversification.

2.4 Representation in local development bodies as well as local DRR, CCA bodies is another window of opportunity in which representatives can lobby necessary actions and policies supporting disaster preparedness, response, recovery and resilience of livelihoods.

3 On Economic Development

3.1 Aligning with priorities of regional development council, regional convergence committee, DTI priority products, key development generators which is also a best practice of DOLE-DILEEP is an excellent point for consideration. Aligning the association or individual livelihood with local development bodies and priorities may increase the likelihood of access to funding.

PRIORITY SETTING AND ALIGNMENT WITH PRIORITIES OF LOCAL DEVELOPMENT BODIES
Data Source: PHCPI (2019)

3.2 Diversifying livelihood across the value chain is a livelihood strategy which would provide alternative source of income if in case the main source of income is hardly hit by disaster. A "value chain" describes the full range of activities required to bring a product or service from conception, through the different phases of production until its delivery to final consumers and final disposal (Kaplinsky and Morris 2001).

3.3 Adapting value chain approaches to capacity building in order to reduce costs is another form of livelihood resilience. This is in alignment with PDP and NCRDP strategies and policy provisions. Value chain approaches are well suited to understanding how poor people in urban

areas can engage, or improve their terms of engagement with various players in the same secto. The benefits of the value chain analysis approach include:

3.3.1 A learning tool to knowing someone's position in the value chain and the value being contributed. It helps in determining the level of economic power as leverage for urban vulnerable communities compared with more powerful firms, in effect the former can influence processes in the value chain;

3.3.2 A powerful diagnostic tool that can identify critical issues for specific target groups – and provides a framework for interventions to change the circumstances of the vulnerable communities.

3.3.3 Identifies the barriers to entry that determine who in the value chain benefits from production for diverse final markets;

3.3.4 Is inherently scalable: even if the initial focus of a value chain development exercise is a single producer group or firm, the same logic can be applied to a cluster of firms, a region or a whole country;

3.3.5 Can provide a policy and restructuring tool to counter both market and state failures.

3.4 Utilizing participatory modules such as the CEFE method in business /livelihood plan or resilience plan formulation. CEFE stands for Competency based Economies – Formation of Enterprise. CEFE is an experiential or "learning by doing" approach that develops personal competencies through guided self-analysis, stimulates enterprising behavior and builds up business competencies through various exercises in the training. It is a participant-oriented (facilitating, rather than teaching) and action-oriented (emphasizing practice rather than theory). The methodology enables the participants to discover for themselves the learning points of experiential values and to internalize their application into their own context.

E. RESULTS OF SEVERAL VALIDATION PROCESSES

1. ON SLP FOUNDATIONS AND FRAMEWORKS

1.1 An inter-agency mechanism was created to operationalize the National Social Protection Strategy as adopted in 2009 (SDC Resolution No. 2 Series of 2009) with identified imperatives for action under the social protection strategy as well as the institutional arrangements including reporting of each of the responsible government agency/entity. The policy responsibility for SP is shared between NEDA and the DSWD, with significant input from other agencies, most notably DOLE. The broad national policy and strategy is guided by Sub-Committee on Social Protection (SCSP) under the NEDA-SDC. The SCSP is being chaired by the DSWD Undersecretary for Policy and Programs with the NEDA Deputy Director General for Planning and Policy as Vice-Chairperson.

1.2 Administrative Order No. 15 Series of 2019 on FY 2020 DSWD Thrusts and Priorities clearly states the Agency's thrust and priorities are consistent with PDP 2017-

2022 and supported of the priority agenda on reducing poverty to 14% by 2022 and empowering the poor vulnerable sectors population. The Department's Organizational Outcome 1: well-being of poor families improved, explicitly mandates the issuance of SLP guidelines based on the 2019 SEA-K evaluation results.

1.3 DSWD has been implementing the Self-Employment Assistance – Kaunlaran (SEA-K) as its flagship program on livelihood assistance for 4 decades. The program adopted a microcredit strategy patterned after the Grameen Bank in Bangladesh. Responding to challenges of program expansion and in contribution to the realization of the thrusts and priorities, Department Order 11 of 2011 was issued to formally introduce SLP with more options of livelihood interventions.

1.4 The SLP implementation is one of the DSWD's Social Protection (SP) program in alignment to PDP 2017-2022. The PDP 2017–2022 defines SP as a set of policies that "*builds the socioeconomic resilience of the poor and those who recently graduated from poverty*". The SLP supports community-based microenterprises to become organizational and economically viable, and link participants to employment opportunities and relevant training.

1.5 The SLP adopted the British Department for International Development's (DFID) Sustainable Livelihood Framework (SLF) which provides a description of a sustainable livelihood as "sustainable if it is independent from external support, if it is able to maintain the long-term productivity of natural resources, if it does not undermine the livelihood options of others, and if it is resilient and can recover from shocks , and can maintain or enhance its capabilities and assets both now and in the future".

2. ON CRITERIA FOR SUSTAINABLE AND RESILIENT LIVELIHOOD

2.1 S*ustainable* and *Resilient* as technical and operational terms should be carefully used hand-in-hand, when applied to livelihood interventions. In the lens of social protection, DRR, CCA, both concepts should not be separated. When talking about resiliency one should also talk about sustainability or vice versa. There are contexts that actors should work with. It does not mean that each criteria dimension shall be ignored. It would provide operational and practical guide if one considers each criteria dimension in formulating policies, strategies and activities.

2.2 Emphasizing the UN's definition of sustainable development having three dimensions: economic development (profit), social inclusion (people), and environmental sustainability (planet). This three-part vision of sustainable development was emphasized at the 2012 Rio+20 Conference. These three dimensions could be flexibly applied in livelihood interventions to become more holistic in its sustainability approach.

2.3 It was recognized that the criteria are good additions to the SLP Mainstreaming Manual which is currently being prepared. The said mainstreaming manual seeks to codify policies, specific processes, roles and responsibilities of both national and regional personnel, and strategize the best intervention for vulnerable communities. This shall cater to the growing number of organized/served SLPAs undergoing the 2-year incubation period (*refer to the MC 22 program participant mainstreaming stage*).

In the context of the Program, mainstreaming refers to the integration of the organized SLP associations to the wider market economy of their respective localities and areas, with a degree of autonomy and capacitated enough to sustain both their organization and their respective livelihood activities.

2.4 Further, said criteria can be integrated into the **Policy and Enabling Mechanism entry points for the SLP mainstreaming**. This would mean that specific sets of policies and indicators for disaster resiliency can be integrated into the manual. As proposed, the following areas could be considered.

2.4.1 Organizational development and association management
2.4.2 Resource and opportunity generation through external linkages and partnerships
2.4.3 Internal enforcement and grievance redress system
2.4.4 Capability building on disaster resiliency and disaster preparedness
2.4.5 Association accreditation and licensure initiatives (BIR, SEC, DOLE, DA, BFAR, DOST, etc.)
2.4.6 E-commerce and online platforms for business opportunity and scaling.

3. ON THE AREAS OF IMPROVEMENT OF MC 22 SERIES OF 2019

3.1 The DSWD-SLP representatives expressed that some of the concepts of MOVE UP Urban Resiliency framework and SLP. If MOVE UP aims to look at social, economic, environment, institutional, and infrastructure aspects; SLP aims to improve human assets, natural and physical assets, social assets, and financial assets.

3.2 Key DSWD-SLP implementers from NPMO agreed on the identified alignments and added that SLP also consider the two main interventions of MOVE UP in strengthening resiliency – Improving Social Relations and Creating an Enabling Environment. It was admitted that SLP did not consider using DRRM, CCA or resiliency lens in its livelihood interventions, thus SLP needs to improve on Building Resilient Capacities.

3.3 It was expressed that some of the areas of improvements could be considered during strategy formulation especially in engaging partners from various levels. Some of the regions are already implementing some of the proposed policy improvements mentioned.

3.4 The identified gaps are valid. This is because SLP was not able to deliberately use resiliency, DRRM and CCA lens in the development of the program and preparation of the guidelines.

3.5 It is also necessary to consider political shocks in putting forward policies or strategies.

F. MOVING FORWARD: ON ENHANCING DSWD MC 22: SERIES OF 2019

1. It is recognized that the DSWD Memorandum Circular No. 22 Series of 2019 on Comprehensive Implementing Guidelines of SLP has some room for improvements. All the criteria proposed together with its dimensions can be converted into policy statements/ recommendations and can be considered as enhancements of said Memo Circular, only if, the government processes and the DSWD Management Committee would allow and

approve it. There are alternatives which can be explored though:

- Addendum to said MC;
- Separate policy statements or policy notes or other acceptable document with urban or disaster resiliency mechanisms in livelihood interventions for the urban vulnerable communities;
- Policy statements or guidelines appropriate or guidance notes for NCR SLP implementation with urban or disaster resiliency mechanisms in livelihood interventions as prototype.
- Inclusion of these policy statements to recommendations in the SLP Mainstreaming Manual. Although, the timeline of completing this manual may affect the MOVE UP project timeline and available resources.

2. MOVE UP hopes to have a review of SLP implementing guidelines and see how both parties can improve the guidelines. It can be done through looking at recommendations on how to consider urban resiliency mechanisms. On document output, it was clarified that it will depend on what will be acceptable to both parties considering government processes vis-à-vis MOVE UP implementation timeline and project deliverables. MOVE UP 3 is about to end by August 2020 and the government processes will take more time than the former's project timeline. Without COIVID-19 pandemic, MOVE UP is hoping on a policy recommendation being approved or being implemented.

3. It was emphasized that for an addendum to be acceptable, the provision proposed must be anchored on national government's issuances, DSWD AOs and following specific principles and guidelines, in this case standards on CCA, DRR, Urban Resiliency.

4. Legal advice can be sought with regards to including the principles of resiliency in the provisions as a course of action of the partnership.

5. There is protocol for Guidance Issuance/ providing substantive content of an MC. They should possess the following: a) Rationale, b) Legal bases, c) Objective, d) Coverage/Scope, e) Definition of terms/ policy and f) Operational guidelines/ implementing mechanism or institutional arrangements. It was suggested that these recommendations be included in the Operational guidelines as policy statements. As an additional input, it was pointed out that the tools that are on the process of incorporating in the Mainstreaming Manual can be anchored on enhanced guidelines; but there must be policy statements for the procedures being recommended.

6. There are existing participatory tools that were inspired by MC 22 s2019; the SWOT analysis, skills training, Risk Assessment/ Project Development process – by virtue and merit, the tools speak of its content. Further, it was agreed that legal bases are in place for promoting resilient livelihood in enterprise development. Thus, it was suggested to integrate the MOVE UP's recommendations in the new implementing guidelines.

7. An idea to explore issuing "supplementary guidelines" instead of amending the current MC. It was pointed out that it would be too early to amend the MC since there is no full implementation yet. Recommendations are not yet feasible at this point. Policy recommendations must be validated from real inputs from the ground.

8. The group pointed out to pilot or validate the recommendations in NCR. The engagement actually encompasses not just urban resiliency, but this goes beyond on this concern only. It also encompasses other pressing cross-cutting concerns in various settings.

9. As an alternative to piloting, it was argued that the better direction is to take off from experiences of regional SLP field offices in

undergoing implementation of resilience mechanisms.

10. It is recognized that it is best to get advice of DSWD legal unit and if an amendment is not within the group's control. Whatever is advised, that is what can be followed. It was stressed that there needs to be an amendment with how the principles are being stated.

11. It was clarified that since MOVE UP is targeting the urban setting sub-national level, NCR in this case, MOVE UP agreed that a lot of discussions will move beyond from simply one setting. But there might have a need to develop criteria or indicators that caters to urban setting, knowing the fact that urban and rural are two different settings which might call for two different indicators for each.

12. It was clarified that piloting or prototyping did not mean executing the recommended provisions or the contents in the Mainstreaming Manual. Instead prototyping in this context meant getting feedback, insights from livelihood organizations by simply choosing one barangay, or association. They agreed that the insights that will be gathered from the ground will be more valuable and could be considered proof of concepts for recommendations. Whatever recommendation that will come out as highly accepted and appreciated can be easily converted as amendment or addendum.

13. It was pointed out with caution that resiliency of livelihoods is not only in disaster situations but even in ordinary situations where the regular SLP guidelines applies. It was shared that the resiliency of livelihoods should be integrated from the social preparation and mobilization stage and up to the last stage.

14. Simply put, integration can be in many forms. Maximum objective is the policy enhancement of the MC. The MOU is the best springboard to achieving the maximum objective while the group work with minimum targets. This step as being internal to SLP, the most legal basis is the MOU; DSWD-NPMO recommended to push through with the next step. The group agreed that whatever output and outcomes with regards to the area of sustainability and resiliency of livelihood interventions as intended enhancements will ultimately have an effect on the SLP one way or another; and not just on SLP but on the Policy as a whole. (e.g. 4Ps Policy may also be affected).

G. SUMMARY AND CONCLUSIONS

1. The intention of collectively agreeing on best practices/principles/policies of sustainable and resilient livelihood interventions for vulnerable communities guided by the standards of urban resiliency, disaster risk reduction (DRR) and climate change adaptation (CCA) was concluded and achieved. **The draft of recommendations/ policy statements to be integrated in MC No. 22, s. 2019 were accepted by the meeting participants but there is a need to determine how and where these can be integrated as specific provisions.**

2. It was further reinforced that Sustainability and Resiliency cannot be separated, rather should be considered as interdependent and interrelated technical terms. It is logical to say that when a livelihood intervention is sustainable, then it is also resilient. One of the agreements made is that this group will not force a definition of a Sustainable Livelihood as a concept, rather for the purposes of process documentation the group may adopt shall the British Department of International Development or DFID's description of sustainable livelihood.

3. Prototyping in this engagement shall be limited to a validation process in a recommended NCR site and getting feedback from the partners on the ground which can be at a small scale such as thru associations and

barangay groups. It was agreed that the insights that will be gathered from the ground will be more valuable and could be considered proof of concepts for recommendations. Whatever recommendation that will come out as a result can be easily converted as amendment or addendum.

4. It is more practical to build on collaborative strategies that consider MOVE UP project timeline and resources, and the operating DSWD policy enhancement/ amendment protocols. The MOVE UP Project should be done in parallel with the Mainstreaming Manual and should not be limited by the latter when it comes to the courses of action.

5. Guidelines were reviewed using principles in DRR, CCA and Urban Resiliency from a third-party perspective and had the objective of moving for changes to the MC. In this light, there is a need to agree on a practical course of action for all the parties. An amendment has been deemed more logical as the new document must possess legal bases on the mother document; for an addendum to be acceptable, the provisions must be anchored on its specific principles and standard of CCA, DRR, Urban Resiliency. Legal advice can be sought with regards to including the principles of resiliency in the provisions as a course of action of the involved parties.

6. Principles of Resiliency, DRR and CCA are missing provisions in the Main Document of MC No. 22 s2019. Validation and Consultation of policy statements/ recommendation can be done side by side. While it was recognized that recommendations employed standard research practices and solid experiences were considered, there is still a different value to gain in validation processes. This way these are turned into shared recommendations.

7. In the end it should be DSWD to decide on how and where to integrate these recommendations/ proposed enhancements. The integration can be in many forms though the maximum objective would be the policy enhancement of the MC 22-Series of 2019. The MOU in itself is an excellent springboard to achieving the maximum objective while working with minimum targets. MOVE UP expresses its appreciation to DSWD who has welcomed the Intention and desired outcome of this engagement and has acknowledged the identified gaps.

CHAPTER IV
CONSOLIDATED RECOMMENDATIONS

A. ON SOCIAL PROTECTION

1. **Recommending policy enhancements on social protection shall be anchored on the National Social Protection Strategy (NSPS).** It prescribed corresponding institutional arrangements between NEDA and the DSWD, with significant input from other agencies, most notably DOLE. This inter-agency mechanism was created to operationalize the identified imperatives for action under the social protection strategy as well as the institutional arrangements including reporting of each of the responsible government agency/entity. This directs that SP programs be grouped into a unified National Social Welfare Cluster.

2. **Components of social protection include: social insurance; social safety nets, social welfare; and labor market intervention.** The DSWD-SLP and DILEEP as government programs are concrete translations of labor market intervention. The thematic areas which MOVE UP intends to strengthen are directly linked with the NSPS. This already satisfies the MOVE UP's aspiration to embed social protection in livelihood interventions.

Table 14. Policy Issuances on Social Protection

Issuances	The Essential of the Issuance
NEDA-SDC Resolution No. 1, series of 2007 "Adopting a Philippine Definition of Social Protection"	Harmonized existing SP Definitions of WB, ADB, ILO, Institute of Development Studies, NAPC
NEDA-SDC Resolution No. 2 series of 2009: "Sub-Committee on Social Protection (SCSP) under the NEDA Social Development Committee (NEDA SDC)"	An inter-agency sub-committee mechanism under NEDA-SDC which leads the operationalization of the Social Protection Strategy. This is being chaired by DSWD and co-chaired by NEDA.
NEDA-SDC Resolution No. 3 series of 2012: Approving and Adopting the SP Operational Framework	- Presented by DSWD and approved by the SDC-Cabinet Level members during its SDC-CL meeting on May 18, 2012. - The core of the framework is the underlying purpose and objective of social protection which is better and improved quality of life for its beneficiaries.
Philippine Development Plan 2017-2022	Defines SP as a set of policies that '*builds the socioeconomic resilience of the poor and those who recently graduated from poverty*'. The plan sets clear targets for coverage expansion and includes the following in its objectives: equity, social cohesion, nation building, conflict management, disaster risk reduction and management, and human capital formation. It prioritizes the needs of the most vulnerable members of the community.

Joint Memorandum Circular No. 1, series of 2015	The JMC enjoined all Provinces, Cities and Municipalities to use the Social Protection Handbook for Local Planning, Implementing, Monitoring and Evaluating SP Programs
DSWD AO No. 7 Series of 2011	Guidelines in the preparation of the Social Protection and Development Report (SPDR)

3. **There are various opportunities around the area social protection**. A World Bank (2018) study in the Philippines identified over 60 different social protection programs; about one-third of these are focused on labor market and employment. There is clarity about the architecture of the three pillars constituting SP: social assistance, social insurance, and labor market interventions. Institutionally, the SP sector seems to be well developed and has a clear framework of laws and regulations with different actors with well-defined roles and controls in place to ensure good governance. SP programs in the Philippines are flexible and can respond to emergencies, shocks, or crisis. However, there are some signs of fragmentation in certain policy areas, overlapping mandates and target population, and several gaps in their monitoring systems.

4. **The Consortium could create a unique value in this policy area if it deliberately co-shape a policy harmonization intervention among various players**. Utilizing the strength and experiences in upholding its existing priority thematic areas of RL, RTM, and ATS, the lens of DRR, resiliency, and CCA; are of high leverage points in co-shaping policy harmonization arrangements.

B. ON ALTERNATIVE TEMPORARY SHELTER

1. **The entry points for policy enhancements towards mainstreaming ATS, involves two basic techniques**. These two, point the reviewer to specific group or level of stakeholders mandated to allocate resources:

   a) **On developing ATS as disaster preparedness at the local government level - municipal/city up to provincial - the closest policy to look at is DILG Memorandum Circular No. 122 Series of 2018** on Guidelines for Local Government Units on the Strengthening of Evacuation Systems Using Local Disaster Risk Reduction and Management Fund (LDRRMF). Clear provisions on ATS were spelled out in pages 3, 5, and 6.

   b) **On providing ATS as a response, determining the response level is the most logical entry point**. Response levels are defined by DSWD AO No. 13 Series of 2015 on Disaster Response Operation Guidelines:
      - Response Level 1- … affected families are likely to stay in ECs for more than a week…(pp21)
      - Response Level 2 – severely affected families need prolonged assistance from 3 -4 weeks in and outside ECs, including temporary shelters…(pp21).
      - Response Level 3 – severely affected families require prolonged five weeks or more accommodation in ECs and temporary shelters (pp22).
      - Response Level 4 – requirements for humanitarian response is beyond the normal structure and mechanism of DSWD

2. **Although not specifically the same to what is being described by MOVE UP, existing policies are already in place which serve as enabling framework to further uphold the validity and**

importance of ATS and thereby executing it accordingly. Usually, conversation on ATS starts at CCCM which would only dilute and drown out the value of ATS, as a work around, stakeholders are advised to directly be guided by these relevant policies.

3. **The concept of temporary shelter in the context of Philippines and DSWD response management considering the international SPHERE standards, have the following typologies:**

    a. temporary shelter provided as part of family kits or non-food items (e.g. beddings, tarpaulin, mats, etc.) provided in Evacuation Centers.
    b. temporary shelter in form of tents inside or outside Evacuation Centers.
    c. temporary shelter in the form of bunk houses are structures temporarily constructed by the government intended for families affected by a disaster while awaiting transfer to permanent shelters.
    d. transition shelter is temporarily shelter established for families facing displacement for more than a month and normally waiting for permanent relocation.

    It was clarified that items A and B are provided by DSWD or by LGUs (depending on the RESPONSE LEVEL) as relief assistance covered in AO 3 Series of 2015 which is part of camp coordination and management, and evacuation. Items C and D are provided by DSWD and/or LGUs covered in AO 9 Series of 2014.

4. **The challenge though, is that there is a need to harmonize the terms being used.** DSWD, DILG and other agencies are using interchangeably the abovementioned typologies of temporary shelter even if each of this has different meaning and implications to implementation.

5. **DSWD AO 3 Series of 2015 is the over-all guidelines in disaster response.** In terms of shelter assistance as specific response intervention, the details in the AO 9 Series of 2014 are being followed. Most of the implementation of the latter happen at the LGU level or level 1&2. It is important to note that DSWD has categories level 3 and 4.

6. **Based on DREAMB's experiences, the following action areas are considered highly relevant**:
    a. Improving the capacity of LGUs in NCR in executing standards of CCM and Evacuation.
    b. Updating most of the contingency plans and DRRM plans.
    c. Mobilizing resources of LGUs for the pre-positioning of resources for relief.

7. **Other important recommendations by both DREAMB and MOVE UP in improving ATS interventions are enumerated herein:**

    8.1 **Always consider involvement of the communities in identifying solutions and resources**. Some of these solutions and existing resources were not considered in the initial stage of preparations by technical persons.
    8.2 **If LGUs are willing to co-develop models of ATS, it has to strengthen collaboration among players in the Science, Technology and Innovation (STI) ecosystem** including government, universities, and private sector-industries to study and design ATS responsive models.
    8.3 **Temporary shelter may be provided at official evacuation sites or centers, through accommodation with host families (communities) or friends, or through other private arrangements.** This can be done by meeting and discussing with host communities prior to

identifying evacuation centers to assess generally their attitude towards displaced populations, as well as the support they may need for hosting.

8.4 **Special shelter arrangements may be necessary for more vulnerable individuals in cases where basic shelter may not meet their needs.** Example of this recommendation is to consider hotels or inns for elderly pregnant women, foster care for unaccompanied children, specialized shelters for those with particular medical issues.

8.5 **Capacity building and other support programs like psychosocial care must also be available to affected individuals and families** in order to increase their coping capacities as victims of disasters and calamities and be able to resume their normal way of life and to ensure safety in their temporary homes.

8.6 **Animals, livestock and pets shall also need to be considered within plans for the provision of shelter and suitable facilities**.

8.7 **To enhance efficiency and effectiveness, creation of a composite team will facilitate the validation, selection and award of temporary shelter assistance for disaster victims.** The conduct of field visit might be made not later than 30 days from the occurrence of disaster.

C. ON RESILIENT LIVELIHOOD

1. The following recommendations are agreed by the stakeholders and considered as guide to strengthen resilient livelihood:

Table 15. Recommendations to Strengthen Sustainable and Resilient Livelihood

Sustainable Livelihood	**Economic development** 1. Economically viable. 2. Mobilizes savings, accesses capital markets, loaning funds, and re-loaning funds. 3. Increases wage and self-employment in the short run and improves socio-economic wellbeing in the long run through acquisition of productive assets and income. 4. Has access to financial services, including affordable credit. 5. Guided by community-driven enterprise development approach anchored on being resource-based and market driven.
	Social inclusion 6. Organizationally viable 7. Encourages community members to organize formal associations that are responsible for projects' implementation with the long-term goal of making these associations self-sufficient 8. Goes through a process of project development with feasibility assessments and project management practices and principles for capacity building purposes. 9. Reduces inequality 10. Protects labor rights and promote safe and secure working environments for all workers. 11. Promotes partnership to achieve goals.
	Environmental sustainability 12. Ensure sustainable consumption and production patterns
Resilient Livelihood	**Creating enabling environment** 13. Implements adaptive alternative livelihood options within the value chains. 14. Has savings management and has access to credit. 15. Considers social protection for entrepreneurs and employees.

	16. Considers provision of wellness, mental health and psychosocial support options for the entrepreneurs and employees. 17. Promotes well-being, mental health and psychosocial resilience.
	Building resilient capacities 18. Capability on personal resilience – Self Control Over Oneself (self-awareness, determination, vision, and self-confidence); Self-Control Over Responses to Other People (interaction, relationships); Self Control Over Responses to Events (organization, problem-solving). 19. Evaluates existing hazards, vulnerabilities and exposure of livelihoods. 20. Identifies critical assets and processes of the livelihood; 21. Assesses livelihood risk impact levels; 22. Having resilience team to prepare livelihood resilience plan or livelihood continuity plan. 23. Ability to resume livelihood operations in relation to suppliers and vendors continuity. 24. Identifying livelihood areas that would need digitization and would need IT assets. 25. Considers risk transfer mechanisms or have considered different types of affordable risk financing or microinsurance such as livelihood insurance or livelihood asset insurance, fire insurance, natural catastrophe insurance, and insurance for enterprise employees with streamlined procedures, rapid payment, a repayment exemption period, and incremental increases in repayment amount.
	Improving social relations 26. Adopts self-governing association development pattern for internal or external economies of scale. 27. Explores being part of the DRRM local bodies (e.g, DRRMC, BDRRMC, etc.)

2. Apart from being agreed by the Consortium and DSWD-SLP, the recommendations enumerated in Table 15, **are aligned with international conventions, national policies and plans. Most importantly, almost all of the items are in line with the SME Resilience Road Map in the Philippines,** a document crafted by a group of experienced stakeholders including iPrepare Business, Asian Disaster Preparedness Center (ADPC), Asian Development Bank (ADB), Government of Canada, Federal Ministry for Economic Cooperation and Development (BMZ), Global Initiative on Disaster Risk Management (GIDRM) and GIZ (GmbH).

3. Additional recommendations as result of the validation processes are the following:

3.1 On Social Inclusion

3.1.1 Livelihood intervention shall explore to include a simplified organizational development and management (ODM) approach, and institutional development options.

3.1.2 **Explore livelihood interventions for women as participants in economic development by integrating a day care system** which can also be a home-based livelihood option – this is another means of income / livelihood diversification.

3.2 On Economic Development

3.2.1 **Aligning with priorities of regional development council, regional convergence committee, DTI priority products, key development generators which is also a best practice of DOLE-DILEEP**. Aligning the association or individual livelihood with local development bodies, priorities to get funding access.

3.2.2 **Diversifying livelihood across the value chain is a livelihood strategy which would provide alternative source of income if in case the main source of income is hardly hit by disaster**. A "value chain" describes the full range of activities required to bring a product or service from conception, through the different phases of production until its delivery to final consumers and final disposal (Kaplinsky and Morris 2001).

3.2.3 **Adopting value chain approaches to capacity building in order to reduce costs.** This is in alignment with PDP and NCRDP strategies and policy provisions. Value chain approaches are well suited to understanding how vulnerable groups in urban areas can engage, or improve their terms of engagement with various players in the same sector.

3.2.4 **Utilizing participatory modules such as the CEFE method in business livelihood or resilience plan formulation.** CEFE stands for Competency based Economies – Formation of Enterprise. CEFE is an experiential or "learning by doing" approach that develops personal competencies through guided self-analysis, stimulates enterprising behavior and builds up business competencies through various exercises in the training. It is a participant-oriented (facilitating, rather than teaching) and action-oriented (emphasizing practice rather than theory). The methodology enables the participants to discover for themselves the learning points of experiential values and to internalize their application into their own environment.

D. ON RISK TRANSFER MECHANISM

1. **In terms of promoting risk transfer mechanism (RTM), MOVE UP gives due consideration on microinsurance as one of its formats. Hence, it shall be guided by Insurance Memorandum Circular 1-2010** on Regulations for the Provision of Microinsurance Products and Services and other various circulars issued by IC towards having MI products that are affordable, with shorter period for claims settlement, with simple and easy-to-understand policy contracts and with simple documentary requirements. Microinsurance shall be best considered as market-based solution and not the sole responsibility of a certain sector.

2. **The Consortium, DSWD-SLP and DILEEP can co-create more value by contributing in addressing the persistent challenges in the playing field of microinsurance.** An ADB study claims that the microinsurance industry has progressed during the last 5 years. There has also been increased awareness and interest in microinsurance among key stakeholders. However, there is still a huge room for growth, considering that at present only about 7.8 million are insured (including dependents) with a microinsurance policy. To ensure having massive clients from the vulnerable communities with microinsurance, it is necessary to sustain the interest of insurance providers in the low-income market and build trust and confidence in insurance. The following are areas of value-creating interventions:

   2.1 **Promoting innovative, effective and efficient delivery channels**. Affordability of premium payments and accessibility to services are two of the key issues in microinsurance. The use of institutions, associations, and points of sale in proximity to the clients play an important role in expanding the reach of microinsurance.

2.2 **Promoting the use of technology-based platforms**. The availability and use of technology (e.g., mobile phones, webapp) and technology-based solutions to bring down costs, improve product value to policyholder, and cover more microinsurance clients. It also provides great potential for increasing microinsurance reach.

2.3 **Facilitating the formalization of associations or community savings groups into mutual benefit associations[37].** In view of their organizational structure, mutual benefit associations (MBAs) can have greater proximity to the low- income market as member-based organizations providing mutual protection. MBAs have been identified as one of the viable institutional structures for microinsurance of informal insurance schemes particularly among entities dealing with low-income market.

2.4 **Promoting index-based or parametric microinsurance products**. With increased frequency of natural calamities due to climate change, the use and adoption of index-based and parametric insurance products are advised. These are alternative risk financing solutions from insurance providers to enable livelihood or associations to transfer risk in a non-traditional way. These approaches tackle measurable index and are based on predefined triggers or pay out mechanisms – without necessarily experiencing the emotional devastation by witnessing livelihood assets washed away by a disaster.

2.4.1 Parameters or indexes being used includes typical weather-related parameters like rainfall amount, temperature and windspeed correlated to client's loss. Example, due to an X amount of rainfall that could possibly destroys a farmer's crops a Y amount as covered by insurance contract could be claimed.

2.4.2 Claims of payment amount is fixed and should be simply stated in the policy contract and is triggered upon exceeding the threshold conditions.

2.4.3 It is not complex to review the parameters because weather stations, satellites, data computing storage and software applications has been available to almost everyone, and these capture accurate weather-related parameters.

[37] MBA is any society, association or corporation, without capital stock, formed or organized not for profit but mainly for the purpose of paying sick benefits to members, or of furnishing financial support to members while out of employment, or of paying to relatives of deceased members of fixed or any sum of money, irrespective of whether such aim or purpose is carried out by means of fixed dues or assessments collected regularly from the members, or of providing, by the issuance of certificates of insurance, payment of its members of accident or life insurance benefits out of such fixed and regular dues or assessments, but in no case shall include any society, association, or corporation with such mutual benefit features and which shall be carried out purely from voluntary contributions collected not regularly and or no fixed amount from whomsoever may contribute.
